INDIVIDUALIZED - EFFICIENT - QUALITY-CONSCIOUS

Magnetic and Precision Clamping **Systems**

power. people. passion.

GENERAL INFORMATION USING THE CATALOGUE AND EXPLANATION OF ICONS

Search options

- 1. Product-specific selection, e.g. controllable permanent magnets or electro magnets, but also demagnetising or pole plates: see table of contents.
- 2. Properties-based selection: see page 35, 40 41, 60, 80 82.

Selecting the right magnetic chuck in three steps

- 1. Which type of processing? For example, only certain types are suitable for milling (also refer to the introduction of the individual chapters or to the icons for suitable machining methods on the individual product pages).
- Workpiece dimensions, most common, especially smallest, thinnest. 2. This provides the selection of the pole pitch (see individual chapters and data sheets).
- Magnet size, accuracy, power supply and cycle length (also refer to chapter 1.1). 3.

Other influences on magnetic forces can be found in chapter 1.4.

Icons for suitable machining methods

Icons for magnet and precision systems

4

Some chapters start with technical information and application examples. A summary of the fundamentals of magnet technology and practical experiences can be found in chapter 1.4, offering additional information on effective use.

In chapters 1.2.2, 1.2.3 and 1.2.5, the magnet sizes are allocated to the suitable control types and control units. This are not included in the scope of delivery of the magnets and must be ordered separately.

General tolerances, unless stated otherwise

- Length dimensions as per DIN ISO 2768-1-m
- Shape and position as per DIN ISO 2768-2-K
- Metric ISO thread as per medium tolerance class

Holding force, unless stated otherwise

The specific holding force data in the chapters as holding force per workpiece area in N/cm² are rated values! They refer to a 100 mm long, 100 mm wide and 40 mm high test workpiece made of steel 1.0037 with polished surface or measurement with holding force tester SAV 486.40. If other conditions apply to the use case, the stated rated holding forces no longer apply.

The rated holding forces in N for electro holding magnets and permanent electro holding magnets apply for 100 % loading of the contact surface and for optimum holding thickness for a polished workpiece made of steel 1.0037. As the material of your products is also very important, please contact us for advice. Other influences on magnetic holding forces are summarised in chapter 1.4.

Information about electrical equipment

- The relative duty cycle (ED) in % refers to a cycle time of 10 min, unless stated otherwise.
- Electro magnetic chucks (chapter 1.2.2) are designed for a 100 % duty cycle.
- Electropermanent magnetic units are designed for a minimum cycle time of three minutes. If you require shorter cycle times, please contact us for advice.

Technical information

Further technical development reserved. No liability is accepted for misprints and errors. We are grateful for any information about these.

ABOUT SAV

 $S \wedge V$

PREFACE BY DR. STEFAN HAMM

" Dear customers

Magnet systems, rotary and stationary workholding – our areas of competence show what SAV is capable of and what we stand for: customer-focused, fully developed and future-proof solutions. We develop, we manufacture, we deliver workholding and automation systems and we are focused on solutions. This becomes evident in our tried and tested standard systems and in the special solutions, which we tailor to customer requirements.

the use of workholding systems.

Let SAV convince you!

mill J

DR. STEFAN HAMM CEO OF SAV GMBH

To ensure that you can find the right solution from us for your requirements, we merged our competences under the umbrella of SAV GmbH in 2016, efficiently bundling our know-how. This allows us to supply everything from a single source, no matter for which area of competence, no matter for which industry. Trained and experienced SAV experts ensure the highest quality standards at our three German sites - "made in Germany". Our motto is: We deliver on our promises!

Especially in the times of Industry 4.0 and the networking of production chains, we need solutions with a vision and the highest level of expertise for processes. With our 40 years of experience in the manufacturing of intelligent workholding systems and automation solutions, we are the right partner for optimising your industrial manufacturing processes with

Our customers' success is the absolute priority in everything we do. With our long-standing experience in terms of material properties, different workpiece geometries and handling applications, we can guarantee

- Quality, operational reliability and economic efficiency

Application-based capacity for maximum performance

 Flexibility based on in-house development and manufacturing competence

Minimal chucking and set-up times

Automation and efficient combined solutions

WE HAVE HIGH **REQUIREMENTS.** FOR OURSELVES.

14

OUR VALUES

OUR OBJECTIVES

CREATING GRIPPING SOLUTIONS TOGETHER.

Our daily actions are based on values which shape our corporate culture and the way we interact with one another: The relationships with our customers are based on cooperation. At SAV, we build our partnerships for the long term. When we negotiate contracts and prices, we are open, objective and fair. One thing is particularly important to us: Of course these values also apply to our employees

We concentrate on the essential aspects. Therefore, we at SAV set ourselves objectives which ensure efficient processes and maximum customer benefit.

... reduces complexity.

handling tasks.

... increases efficiency.

Because we are your solution provider for all workholding technology and process requirements, including automated system solutions.

... reduces costs.

fixtures and individual system solutions.

... increases safety.

Because we are your one-stop provider for the complete workpiece handling process.

FOCUSED ON IDEAL RESULTS

Because we are your contact for all workholding and

Because we offer you intelligently combined workholding

Service point

Asia Pacific

We focus on solutions

... and bring together what is required for reliable workpiece handling and workholding processes:

- Fast processing and quality
- Efficiency and precision
- Customisation and automation
- Reliability and creativity

We see solutions where others see contradictions. True challenges are one of our specialities.

S/V

- Support during the entire product development phase – from the initial idea to after sales service

OUR WORKFLOW

SAV ENGINEERING WORKFLOW

WE MAKE MORE OUT **OF YOUR IDEAS**

As an expert for magnets, workholding and automation, we are ONE contact for the overall process: At our three German centres of excellence, we offer you the complete range of options for taking your project to success efficiently. Whether you want to order quality products from the standard range or are looking to develop a custom solution for your specific requirements: We are by your side, from the initial idea to successful implementation – and beyond. Cost transparency from the outset and many decades of engineering experience included.

Every planning phase starts with the technical evaluation of your project and the Sales department. During the subsequent design engineering phase, our experts turn theory into practice and work out all relevant details until your solution finally becomes reality in manufacturing. For us, the engineering process does not end with successful commissioning and induction: Our extensive after sales service offers customers long-term added value.

Through continuous exchange with our customers, we have developed our competences over a period of 40 years with new challenges around every corner.

Our motivation: power. people. passion.

" ONE CONTACT FOR THE ENTIRE **PROCESS!**

S/V

OUR FIELDS OF WORK

 $S \wedge V$

special solutions.

24

OUR APPLICATIONS ARE AS VARIED AS WE ARE

Our expert knowledge is broad as well as deep: Magnet and precision systems, stationary and rotary workholding as well as automation solutions are among the core competences of SAV, which we offer as standard versions and as customised

OUR SOLUTIONS FOR MACHINING PROCESSES

PRECISE, RELIABLE, FLEXIBLE -FOR ALL MACHINING PROCESSES

We stand for variety, which is why SAV high-performance magnets are used in all areas of workholding. Because we combine our development and manufacturing competence under one roof, we can react flexibly to our customers' individual requirements and offer standard versions as well as customised special products. This allows us to always find the ideal solution for your application - no matter which machining process is involved, from grinding, milling, turning and hard turning to demagnetising.

INDUSTRY-WIDE SUCCESS

Thanks to our comprehensive product portfolio and our extensive know-how, SAV solutions are used in a variety of different areas: from machine tables to fully automated production. Whether in automotive, mechanical engineering, medical technology, aerospace, steel construction or in die and mould making - we are in our element in all industries and in all disciplines of workholding. Because we understand exactly which requirements matter in modern manufacturing today.

AUTOMOTIVE

 $S \wedge V$

FULLY FOCUSED ON SOLUTIONS

S/V

Anything but standard: Every idea is unique and requires a special procedure. That is why we at SAV specialise in meeting your ideas and requests with individual product solutions – completely without compromises. This takes more than just theoretical design engineering knowledge: It requires a feeling for different materials and their properties, an understanding of the complexity of processes and creativity for finding the most reliable solution.

Dear customers

PREFACE BY MARTIN SCHACHERL

We bring together what is required for correct workpiece handling processes: Fast processing and quality. Efficiency and precision. Customisation and automation. Because true challenges are one of our specialities.

Our workholding experts implement a variety of different

requirements with a focus on process optimisation.

We combine all possible workholding and handling disciplines in an intelligent, forward-looking and individually tailored process.

Have a browse of our comprehensive range!

MARTIN SCHACHERL MANAGING DIRECTOR OF SAV GMBH S^{A}

CHAPTER 1 **MAGNET SYSTEMS**

Magnetic workholding solutions are everything but a standard for us. The manufacturing of our high-performance magnets uses our full range of experience in the areas of material properties, design engineering and machine integration.

Our product range in the area of magnet systems comprises permanent, electromagnetic and electro permanent magnetic workholding products, as standard and special solutions.

In addition to the classic magnetic chucks, we also offer sine tables, demagnetisers, pole plates and a variety of different auxiliary magnetic tools.

The development of magnetic chucks for milling revolutionised manufacturing technology:

- Minimal chucking and set-up times
- Active magnetic workpiece positioning
- Machining from 5 sides
- Universal and flexible

Magnet technology:

- Two-dimensional holding force
- High damping
- Pulling down of uneven parts
- High level or operating and process reliability
- Also suitable for larger air gaps
- Modular design
 - For palletising

Wear-free

High efficiency

Extreme holding forces

 High level of flexibility at low acquisition costs

For very large parts

Full or partial use of

the machine table

Reliable process and chucking

Optimum workpiece damping

" WE DEVELOP AND MANUFACTURE MAGNET SYSTEMS, ALSO CUSTOMISED TO YOUR WORKPIECES AND MACHINING REQUIREMENTS

JUST CONTACT US

DIETER LEIKAUF **BUSINESS UNIT MANAGER** MAGNET SYSTEMS

CHAPTER SELECTION CRITERIA BY MAGNETIC PRINCIPLES

SAV

1. MAGNET SYSTEMS 1.1 **SELECTION CRITERIA BY MAGNETIC PRINCIPLES**

THE RIGHT PRODUCT FOR ANY APPLICATION

PERMANENT MAGNETIC CHUCKS

PROPERTIES

- Mechanical, manually operated control
- Very low magnetic field, no adhesion of swarf
- No heat distortion caused by electricity input
- Suitable for palletising
- Size with one circuit up to 600 x 300 mm
- Cost-efficient
- Note information on maximum speed for round magnets
- For technical reasons, the holding force is slightly lower on the area of the activation mechanism

ELECTRO MAGNETIC CHUCKS

PROPERTIES

- Force generated by permanent power supply
- Deep magnetic fields for larger air gaps
- Not suitable for palletising
- Note max. speed for round magnets (chapter 1.4)
- Thermal expansion of a few 0.01 mm depending on duty cycle
- Designed for 100 % duty cycle
- Stable holding forces even for relatively deep machining on thin sheet metal
- Also with water cooling, depending on the design
- Good demagnetising quality and reproducibility of the holding forces
- Holding force and demagnetising can be controlled with a control unit

ELECTRO PERMANENT MAGNETIC CHUCKS

PROPERTIES

- Force generated by a current pulse with a duration of 800 ms
- No continuous energy consumption
- No thermal expansion, highest precision during grinding
- Suitable for palletising with connector
- Also with demagnetising cycle, depending on the design
- Maximum operational reliability
- Extreme holding forces for magnetic chucks for milling
- Designed for shortest cycle duration of 3 min (time from part to part), shorter cycle durations possible on request
- Holding force and demagnetising can be controlled with a control unit
- Note information on maximum speed for round magnets (chapter 1.4)
- On request, power supply also with connector for easy spindle integration
- Spindle flange possible on request

power. people. passion.

S/V

APPLICATIONS

Die-sinking EDM with neodymium magnetic circular chuck SAV 244.07

grinding parts below 20°.

SAV PALLETISING SYSTEMS

Permanent magnetic chucks with reference system and flushing holes. We supply workholding fixtures for electrical discharge machining (EDM) with any adaptations on request.

Permanent magnetic chucks with reference system for use in the dielectric fluid. The workpieces are loaded outside of the machine and the position is measured.

CUSTOMER BENEFIT

PERMANENT MAGNETIC CHUCKS FOR GRINDING/EDM

- Magnet with high "even" holding force; performance, accuracy
- Large magnetically active area; flexibility
- Low magnetic field; accuracy, safety

2

- Stop bar with groove; accuracy
- Stops integrated into the housing; safety

3

- Low-strength opposite field during switch-off facilitates removal of workpieces; safety, flexibility
- Double neodymium magnet system for very high holding force; performance, safety

4

- Full steel housing; high accuracy, high stability
- Fully leak-tested; safety

 $S^{\}$

- Easy control; safety
- Unique control system, no deformation; accuracy

6

Steel housing can be machined; flexibility

7

- Control from above, ideal for die-sinking EDM; flexibility
- Unique control system, no deformation; accuracy
- Easy control; safety
- Flat design; flexibility

SAV 220.30

PERMANENT MAGNETIC PALLETS

Transverse pole pitch P = 1.9 mm

APPLICATION

In conjunction with zero-point workholding systems. Can be adapted to most systems.

MATERIAL

Aluminium main body with steel 1.0037/1.4571 pole plate

TECHNICAL DATA

- Tapped holes for stop bars and stop brackets possible.
- Magnetic field height: 4 mm
- Wear layer of the pole plate: 3 mm
- Rated holding force: 80 N/cm²
- Pole pitch: 1.9 mm

₫ 🗳

SAV 220.31

PERMANENT MAGNETIC PALLETS

True transverse pole pitch P = 6 mm

APPLICATION

In conjunction with zero-point workholding systems. Can be adapted to most systems.

MATERIAL

Aluminium main body with steel 1.0037/1.4571 pole plate

TECHNICAL DATA

- - Wear layer of the pole plate: 2 mm
 - Rated holding force: 120 N/cm²

- brackets possible
- Low magnetic field
- Clamping holes on the top surface on

Permanent magnetic chuck SAV 243.01 - 500 x 200

SAV 243.07

PERMANENT MAGNETIC CHUCKS

With fine transverse pole pitch P = 1.9 mm, low version

APPLICATION

Primarily for EDM and grinding. Suitable for thin parts.

TECHNICAL DATA

- - Magnetic field height: 6 mm

DESIGN

Extremely low height and weight-optimised. ON/OFF control from above. Standard version without flushing hole. Pole divisions made of 0.5 mm brass/1.4 mm steel. Available with flushing hole(s) (surcharge applies). Available with adaptation for zero-point workholding system. Crosswise and lengthwise stop bar. Attached with clamps.

APPLICATION

Primarily for horizontal machining of workpieces.

DESIGN

Upright chuck made of St 52-3. Supplied with permanent magnetic chuck SAV 243.01. Pole divisions made of 0.5 mm brass/1.4 mm steel. The upright chuck can also be manufactured with other controllable permanent magnetic, electromagnet or electro permanent magnetic chucks. Clamping grooves (N).

SAV 242.91

PERMANENT MAGNETIC CHUCK TOWERS Chuck towers, precision-milled

APPLICATION

For horizontal milling and drilling processes.

DESIGN

Chuck tower made of St 52-3, precision-milled. With 4 permanent magnetic chucks SAV 243.11, amplified high-energy system, 15 mm pole pitch, fastening holes as required.

TECHNICAL DATA

- Perpendicularity: 0.03/1000 mm
- Parallelism: 0.04/1000 mm
- Rated holding force: 150 N/cm²
- Magnetic field height: 12 mm
- Wear layer of the pole plate: 5 mm

Δ

Е 9

TECHNICAL DATA

• Rated holding force: 120 N/cm²

(on inducible steel surface: 180 N/cm²)

• Magnetic field height: approx. 4 mm

• Wear layer of the pole plate: 3 mm

SAV 243.10

APPLICATION

magnets in the pole gap.

DESIGN

NEODYMIUM MAGNETIC CHUCK

With P = 6 mm transverse pole pitch, neodymium iron boron magnet, extremely high holding force

For workpieces which are difficult to chuck, e.g. Ferro-Tic, tungsten carbide

with cobalt content, very small workpieces. For grinding workpieces which

Extremely high holding force using a specially developed process. Sturdy

solid steel body. Separate ON/OFF control possible on the 2 face sides.

Pole divisions made of 4 mm steel and 2 mm epoxy resin with NdFeB

are difficult to chuck magnetically, and for hard turning.

PERMANENT MAGNETIC CHUCKS

With continuous transverse pole pitch P = 15 mm, with neodymium magnets, amplified system

APPLICATION

TECHNICAL DATA

Suitable for heavy and rough machining. The dense magnetic field with maximum concentration opens up areas of application for small, medium and large workpieces, even with rough or uneven surfaces.

DESIGN

Neodymium magnet system with high holding force. ON/OFF control using a manual lever. In the OFF position, a low-strength opposite field facilitates removing of the workpieces. The magnets are equipped with lengthwise and crosswise stops.

48

• Rated holding force: 150 N/cm² • Magnetic field height: approx. 12 mm • Wear layer of the pole plate: 5 mm

SAV 244.01

PERMANENT MAGNETIC CIRCULAR CHUCKS With very fine parallel pole pitch P = 1.9 mm

SAV 244.03

PERMANENT MAGNETIC CIRCULAR CHUCKS

With parallel pole pitch P = 7 mm

APPLICATION

For chucking small and thin to medium workpieces.

DESIGN

Powerful magnet system with neodymium magnets and low magnetic field height. Magnetic force continuously adjustable. Available with flange on request (see SAV 248.90 to 248.94).

Size J (diameter and depth) machining is possible at the centre of the pole plate. For the other sizes, a 5 mm wearing thickness applies across the entire surface. Concentric lines facilitate visual alignment of the workpieces.

TECHNICAL DATA

- Rated holding force: up to ø 160: 60 N/cm² from ø 200: 90 N/cm²
- Magnetic field height: 8 mm
- Wear thickness of the top surface: 5 mm
- Geometrically balanced: Quality G 6.3

For small and medium workpieces.

• Rated holding force: 100 N/cm² • Magnetic field height: 6 mm

 $S \wedge V$

• Wear layer of the pole plate: 3 mm

TECHNICAL DATA

DESIGN

The special magnet system allows chucking of parts as thin as 1 mm with maximum holding force. ON/OFF control with removable key (radial adjustment). The machine spindle should be lockable for ON/OFF. Available with flange on request (see SAV 248.90 to 248.94).

CYLINDRICAL GRINDING ON PERMANENT MAGNETIC CIRCULAR CHUCK

Application example for SAV 244.06 with customised pole shoes for up to 300 different workpieces.

SAV 248.01

LAMINATED TOP PLATES

For placing on circular magnets with parallel pole pitch

APPLICATION

For chucking profiled workpieces on magnets with parallel pole pitch. Suitable for round magnets SAV 244.01 and SAV 244.11.

DESIGN

Any type and form of profiles can be machined into the chuck blocks (can also be provided by us). The max. integration depth must be noted. Attaching to a magnet upon agreement. The pole division must run parallel to the base magnet.

TECHNICAL DATA

- Pole pitch: 3 mm steel, 1 mm brass
- Maximum integration depth: 8 mm

The machining process can cause discolourations. However, these do not constitute a technical defect.

┫

SAV 244.06

PERMANENT MAGNETIC CIRCULAR CHUCKS With radial pole pitch

APPLICATION

For round and ring-shaped workpieces.

DESIGN

High magnetic force. Concentric rings allow easy alignment of workpieces. Magnetic field continuously adjustable up to ø 300 mm. Through hole possible up to max. diameter **D**. Standard version without through hole at the centre. Diameter C is magnetically not active. Available with flange on request (see SAV 248.90 to 248.95).

Larger diameters with T-grooves on request. Pole gap with brass pigment.

TECHNICAL DATA

- Rated holding force: 80 to 150 N/cm²
- Wear thickness of the top surface: 5 mm (for A = 100 to 300 mm) 10 mm (for A = 350 to 400 mm)
- Geometrically balanced: G 6.3

For adapting to machine and workholding fixture

APPLICATION

For flanging on round magnets or other workholding fixtures. For fittings as per DIN 228.

DESIGN

Soft steel flanges as per DIN. Machined on the spindle side. The magnet-side/chuck-side adaptation is carried out as required (please state diameter and hole pattern when ordering). On customer request, we supply our round magnets already fully flanged. Hardened, polished version made of casehardened steel available on request.

 $S \wedge V$

ELECTRO MAGNETIC CIRCULAR CHUCK

For slide shoe grinding of rolling bearing rings > 400 mm

SAV 243.40

ELECTRO MAGNETIC CHUCKS With continuous fine transverse pole pitch P = 4 mm

Electromagnet systems with very narrow pole pitch. Especially suitable for thin parts. Main workpiece axis parallel to the magnet length.

DESIGN

- Pole plate with particularly narrow, continuous transverse pole pitch, 3 mm steel and 1 mm brass.
- Pole divisions bonded and additionally bolted together solidly with tie rods lengthwise
- Pole plates bolted in a narrow grid
- 8 mm wear layer on the pole plate
- Low magnetic field height of 4 mm
- Chucking slots on both face sides
- Length over 1000 mm with through holes for fastening upon agreement
- Robust and water-tight
- Protection rating IP 65
- 100 % duty cycle
- Suitable for connecting to the SAV 876.10 control unit

RATED HOLDING FORCE

100 N/cm², controllable with control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED

24 V DC up to and including 118 W 110 V DC for all other sizes

APPLICATION

For chucking thin, plate-shape workpieces with shape and position tolerances of 0.01 to 0.02 mm.

╝

 For main workpiece axis perpendicular to the pole pitch

 For thin workpieces up to: min. thickness = 2 mm

- Stop bar on one short and one long side
- 3 m connecting cable on right short side, rear
- Larger magnetic chucks are provided with lifting lugs for transport

40

- Control and hand remote unit not in the scope of delivery
- Clamps

SAV 243.41

ELECTRO MAGNETIC CHUCKS With continuous fine longitudinal pole pitch P = 4 mm

Electromagnet systems with very narrow pole pitch. Especially suitable for thin parts. Main workpiece axis at right angle to the magnet length.

DESIGN

- Pole plate with particularly narrow, continuous longitudinal pole pitch, 3 mm steel and 1 mm brass
- Pole divisions bonded and additionally bolted together solidly with tie rods
- Pole plates bolted in a narrow grid
- 8 mm wear layer on the pole plate
- Low magnetic field height of 4 mm
- Chucking slots on both face sides
- Length over 1000 mm with through holes for fastening upon agreement
- Robust and water-tight
- Protection rating IP 65
- 100 % duty cycle
- Suitable for connecting to the SAV 876.10 control unit

RATED HOLDING FORCE

100 N/cm², controllable with control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED

24 V DC up to and including 106 W 110 V DC for all other sizes

APPLICATION

For chucking thin, plate-shape workpieces with shape and position tolerances of 0.01 to 0.02 mm.

 For main workpiece axis perpendicular to the pole pitch

SCOPE OF DELIVERY

For flat workpieces:

min. width = 40 mm

- Stop bar on one short and one long side
- 3 m connecting cable on right short side, rear
- Larger magnetic chucks are provided with lifting lugs for transport
- Control and hand remote unit not in the scope of delivery
- Clamps

ORDERING EXAMPLE

SAV no. - A x B - rated voltage Designation Electro magnetic chuck SAV 243.41 - 1200 x 500 - 110 V

ELECTRO MAGNETIC CHUCKS With continuous transverse pole pitch P = 13 mm, 18 mm and 25 mm The magnetic chuck features a high magnetic power, sturdy design and a long service life. The pole pitch forms "true" N and S poles.

DESIGN

- Solid pole plate with 13 mm, 18 mm or 25 mm transverse pole pitch "True" N/S pole spacing
- With water cooling for increased accuracy on request With compressed air holes for easier removal of large
- parts (adhesion) for P = 18 mm or 25 mm on request
- Pole plates bolted in a narrow grid
- 8 mm wear layer on the pole plate
- Chucking slots on both face sides
- Length over 1000 mm with through holes for fastening upon agreement
- Robust and water-tight
- Protection rating IP 65
- 100 % duty cycle
- Suitable for connecting to the SAV 876.10 control unit

RATED HOLDING FORCE

90 N/cm², with P = 13 mm pole pitch 110 N/cm², with P = 18 mm pole pitch 115 N/cm², with P = 25 mm pole control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED

24 V DC up to and including 64 W 110 V DC for all other sizes

APPLICATION

For universal chucking of workpieces with shape and position tolerances of 0.01 to 0.02 mm.

 For main workpiece axis perpendicular to the pole pitch

- For workpieces up to min. thickness x: 4.5 mm with P = 13 mm 6.0 mm with P = 18 mm 8.5 mm with P = 25 mm
- For flat workpieces min. a: $25 \text{ mm} \times 25 \text{ mm}$ with P = 13 mm $32 \text{ mm} \times 32 \text{ mm}$ with P = 18 mm $45 \text{ mm} \times 45 \text{ mm}$ with P = 25 mm

SCOPE OF DELIVERY

- Stop bar on one short and one long side
- 3 m connecting cable on right short side, rear
- Larger magnetic chucks are provided with lifting lugs for transport
- Control and hand remote unit not in the scope of delivery
- Clamps

implemented by joining several blocks without gaps.

ELECTRO MAGNETIC CIRCULAR CHUCKS SAV 244.40 With radial pole pitch

The electro magnetic circular chucks feature high holding forces. Radial T-slots can be machined into the pole plate for universal use or for use of pole shoes.

DESIGN

- Solid pole plate
- The radial pole positioning is particularly suitable for using pole shoes. This prerequisite is absolutely required for the runout of the tool or the grinding wheel in case of 3-sides machining. Version with T-slot (T) as per DIN 650-10^{H10} are available for this.
- 8 mm wear layer on the pole plate
- Protection rating IP 65
- 100 % duty cycle
- Suitable for connecting to the SAV 876.10 control unit
- Available with flange on request (see SAV 248.90 to 248.94).

RATED HOLDING FORCE

120 N/cm², controllable with control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED

24 V DC up to and including 90 W power 110 V DC for all other sizes

APPLICATION

For grinding of cylindrical and ring-shaped workpieces on carousel-type internal and external grinding machines. Also suitable for turning with shape and position tolerances of 0.01 to 0.02 mm.

- Same pole pitch on the circumference, therefore suitable for ring-shaped workpieces
- For workpieces up to min. width equivalent to 35 % pole pitch on the pitch circle diameter

Also for thin rings

SCOPE OF DELIVERY

- Larger round magnets are provided with threads for transport
- Standard version without T-slots and pole shoes
- Standard electrical connection centrally on the rear side using terminals
- Optionally available with integrated flat slip ring
- assembly for diameters from 1000 mm
- Control and hand remote unit not in the scope of delivery

68

ELECTRO MAGNETIC CIRCULAR CHUCKS SAV 244.41 With circular pole pitch

Thanks to the circular pole pitch, the electro magnetic circular chuck has a strong, low magnetic field for thin plates.

DESIGN

- Pole pitch manufactured "gap-free"
- Pole plates bolted in a narrow grid
- 8 mm wear layer on the pole plate
- Protection rating IP 65
- 100 % duty cycle
- Suitable for connecting to the SAV 876.10 control unit
- Available with flange on request (see SAV 248.90 to 248.94).

RATED HOLDING FORCE

80 N/cm², controllable with control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED

24 V DC up to and including 90 W 110 V DC for all sizes

APPLICATION

Primarily for grinding of disc-shaped workpieces on internal and external grinding machines with rotary table. Not for thin rings. The circular pole pitch also allows machining of multiple parts which are not placed centrally. Also suitable for turning with shape and position tolerances of 0.01 to 0.02 mm.

 Circular pole pitch ensures even distribution of holding force on the circumference. This makes it suitable for thin, flat parts (e.g. saw blades).

□45

- Placement of multiple parts on pitch circle diameter possible
- For workpieces up to min. thickness: 2 mm with P = 5.5 mm4 mm with P = 9 mm8 mm with P = 18 mm
- For flat workpieces: Min. size = $45 \text{ mm} \times 45 \text{ mm}$
- Not suitable for thin rings

SCOPE OF DELIVERY

- Larger round magnets are provided with threads for transport
- Standard electrical connection centrally on the rear side using terminals
- Optionally available with integrated flat slip ring
- assembly for diameters from 1000 mm
- Control and hand remote unit not in the scope of delivery

ELECTRO MAGNETIC CIRCULAR CHUCKS SAV 244.43

With parallel pole pitch P = 4 mm

Round magnet with fine pole pitch for thin workpieces. Centre magnetically active.

DESIGN

- Pole plate with particularly narrow, continuous pole pitch, 3 mm steel and 1 mm brass
- Low height
- Pole divisions bonded and reinforced with tie rods
- High accuracy thanks to pole plates bolted in a narrow grid
- Low field height of 4 mm
- Switch-off using demagnetising cycle
- Fastening hole pattern with threads at the rear
- or through holes upon agreement
- 8 mm wear layer on the pole plate
- Robust and water-tight
- Protection rating IP 65
- Suitable for connecting to the SAV 876.10 control unit

APPLICATION

For grinding thin, flat workpieces.

- Grinding thin plates, wide rings with low height and min. contact widths of 40 mm
- For workpieces up to: min. thickness = 2 mm

For flat workpieces:

min. length = 40 mm

CAD -

RATED HOLDING FORCE

100 N/cm², controllable with control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED

110 V DC

SCOPE OF DELIVERY

- Larger round magnets are provided with threads for transport
- Standard electrical connection centrally on the rear side using terminals Control and manual operation not in the scope of delivery

ELECTRO MAGNETIC CIRCULAR CHUCKS FOR SAV 244.45 **CENTELESS SHOE GRINDING** With pot magnet system for large range of workpieces

Special round magnet for thin rings (rolling bearings).

DESIGN

- Extreme magnetic field for grinding a large range of workpieces
- Delivery with drivers upon agreement or adapted to existing drivers
- Spindle adaptation upon agreement
- On request with exchangeable pole plates for large chucking area
- For easy workpiece handling, easy to automate
- Internal cooling water feed possible
- Control and hand remote unit not in the scope of delivery

APPLICATION

- · For grinding small rings with small workpiece contact area
- Eccentric workpiece chucking and positioning using stationary slide shoes for extremely low wall thickness fluctuation
- Easy changeover with universal workpiece drivers
- Universally suitable for large range of diameters
- For chucking workpieces up to 500 mm diameter
- Workpiece eccentric to the spindle
- Magnet for rotation, slide shoes (provided by customer) for precision

ELECTRONIC POLARITY-REVERSING CONTROL UNITS

With integrated microcontroller and holding force control

DESIGN

The device complies with the standards:

- 2014/35/EU Low Voltage Directive
- 2014/30/EU Electromagnetic Compatibility Directive
- 2011/65/EU RoHS

A safety contact in the control unit can be used to prevent machining of the workpiece if the voltage unit is not switched on.

Manually actuated with illuminated push-buttons. The optional connection to a CNC control uses a 24 V signal voltage.

A stepped holding force control is integrated as a standard. It can be controlled with a coding switch.

When using the lower levels of the holding force control, it must be noted that safety as per the accident prevention regulations is no longer ensured. The enabling level can be adjusted, however, and must be adapted to the workpiece.

Ambient temperature max.: 45 °C Power supply: 230/400 V DC Frequency: 50/60 Hz Duty cycle for electromagnets: 100 %

APPLICATION

For electromagnetic workholding devices. Also suitable for retrofitting.

FUNCTION

Electronic polarity reversal control units supply electromagnetic workholding devices with direct current. In addition, the integrated polarity reversal device and microcontroller reduce the residual holding force between the magnetically held workpieces and the workholding device caused by remanence. This makes it easier to remove the workpieces from the magnetic chuck and to remove any swarf generated. At the same time, the residual field strength in the workpiece is dissipated almost completely.

For parts which are particularly difficult to magnetise, the controller offers a number of advanced polarity reversal programs. When ordering a magnetic chuck and polarity reversal control unit together, you will of course receive optimised settings for time and magnetic action. For your safety, the device permanently monitors the power source, its own power components and all connecting cables including the magnetic coil. An LCD display acts as a signal generator.

PERFORMANCE CHARACTERISTICS

- Small and compact
- Can be integrated into any machine control cabinet
- User-friendly with LCD plain text display and film keypad
- Universal for all magnet types and voltages
- Reliable and safe operation

HAND REMOTE UNITS

For actuating polarity reversal control units SAV 876.10

SAV 876.02 - SE3

DESIGN

To comply with accident prevention regulations on machine tools, it must be ensured that the machine feed is only enabled when the chucking magnet is activated (using auxiliary contacts) and that the activation is monitored with an indicator light. The control units comply with these regulations.

The indicator light is integrated into the keys of the control unit. The auxiliary contacts for the machine feed are located in the polarity reversal control unit.

APPLICATION

For switching DC magnets in conjunction with the electronic polarity reversal control units SAV 876.10. The yellow and green keys are used for switching on. The yellow and red keys are used to initiate the polarity reversal process. Any malfunctions detected by the polarity reversal control units are also indicated by a coded flashing signal in the red key. The holding force can be selected in 8 levels.

HAND REMOTE UNIT TYPE SE3

For holding force control at 8 levels for inverse BCD coding, with integrated indicator lights and a 2 m numbered cable, 9-pole. Additional numbered cable available (surcharge applies).

TECHNICAL DATA

- Housing size (LxWxH): 160 x 80 x 60 mm
- Operating voltage: 24 V
- Protection rating: IP 63

SAV 876.02

Protection class: III

- SE2

CONTROL ELEMENTS FOR INSTALLATION

CONTROL ELEMENTS TYPE SE2-1 TO SE2-3

2 illuminated push-buttons and coding switch with 8 levels for holding force adjustment with inverse BCD coding Complete set available as type SE2-S.

Coding switch SE2-1

button, green SE2-2 button, red SE2-3

ELECTRO PERMANENT MAGNETIC CHUCKS With continuous transverse pole pitch P = 13 mm, 18 mm and 25 mm

The magnetic force is generated by the permanent magnets which are magnetised and demagnetised with short current pulses. The block magnet features a sturdy design and a long service life. The pole pitch forms "true" N and S poles.

DESIGN

- Solid pole plate with 13 mm, 18 mm or 25 mm transverse pole pitch
- "True" N/S pole spacing
- Switch-off using demagnetising cycle
- Electro permanent magnetic system for absolute safety in case of power failure.
- On request available with compressed air holes for P = 18/25 mm for easier removal of larger parts (adhesion)
- High accuracy thanks to pole plates bolted in a narrow grid
- Reinforced systems for high wear possible on request
- 8 mm wear layer on the pole plate
- Pole plate can be replaced when worn
- Chucking slots on both face sides
- Length over 1000 mm with through holes for fastening upon agreement or machine table
- Robust and water-tight
- Protection rating IP 65

RATED HOLDING FORCE

90 N/cm², with P = 13 mm pole pitch 110 N/cm², with P = 18 mm pole pitch 115 N/cm², with P = 25 mm pole pitch Controllable with control unit.

RATED VOLTAGE, RECOMMENDED

210 V IMP up to size A x B = 600 x 400 **360 V IMP** above size $A \times B = 600 \times 400$

APPLICATION

For universal chucking of workpieces with high precision.

- For main workpiece axis perpendicular to the pole pitch
- For workpieces up to min. thickness x: 4.5 mm with P = 13 mm6.0 mm with P = 18 mm 8.5 mm with P = 25 mm
- For flat workpieces min. a: $25 \text{ mm} \times 25 \text{ mm}$ with P = 13 mm $32 \text{ mm} \times 32 \text{ mm}$ with P = 18 mm $45 \text{ mm} \times 45 \text{ mm}$ with P = 25 mm

□a

SCOPE OF DELIVERY

- Stop bar on one short and one long side
- 3 m connecting cable on right short side, rear
- On request with water-tight heavy-duty power connector
- Larger magnetic chucks from 25 kg are provided with lifting lugs for transport
- Control and hand remote unit not in the scope of delivery
- Clamps

ELECTRO PERMANENT MAGNETIC CHUCKS

With continuous fine longitudinal pole pitch P = 4 mm

Electro permanent magnetic systems with very narrow pole pitch. The magnetic force is generated by the permanent magnets which are magnetised and demagnetised with short current pulses. Especially suitable for thin parts. Main workpiece axis at right angle to the magnet length.

DESIGN

- Pole plate with particularly narrow, continuous longitudinal pole pitch, 3 mm steel and 1 mm brass
- Pole divisions bonded and additionally bolted together solidly with tie rods
- High accuracy thanks to pole plates bolted in a narrow grid
- Switch-off using demagnetising cycle
- 8 mm wear layer on the pole plate
- Low magnetic field height of 4 mm
- Electro permanent magnetic system for absolute safety in case of power failure
- Chucking slots on both face sides
- Reinforced systems for high wear possible on request
- Length over 1000 mm with through holes for fastening upon agreement
- Robust and water-tight
- Protection rating IP 65

RATED HOLDING FORCE

100 N/cm², Controllable with control unit

RATED VOLTAGE, RECOMMENDED

210 V IMP up to size A x B = 600 x 250 **360 V IMP** above size A x B = 600 x 250

APPLICATION

For chucking thin, flat workpieces with high precision.

 For main workpiece axis perpendicular to the pole pitch

- For thin workpieces up to: min. thickness = 2 mm
- For flat workpieces:

SCOPE OF DELIVERY

min. width = 40 mm

- Stop bar on one short and one long side
- 3 m connecting cable on right short side, rear
- On request with water-tight heavy-duty power connector
- Larger magnetic chucks are provided with lifting lugs for transport
- Control and hand remote unit not in the scope of delivery
- Clamps

86

O

æ Δ

Other sizes and rated voltages on request. Larger chucking areas can be implemented by joining several blocks without gaps. Allocation to the correct control unit is based on the max. power consumption/magnet voltage.

SAV 243.72

ELECTRO PERMANENT MAGNETIC CHUCKS With fine longitudinal pole pitch P = 4 mm and magnetisable stop bars

The newly developed workholding system allows workpieces to be reliably pulled against the stop using magnetisable stops. Insertion errors can be prevented with this, particularly in shift operation. Electro permanent magnetic systems with very narrow pole pitch.

The magnetic force is generated by the permanent magnets which are magnetised and demagnetised with short current pulses. Especially suitable for thin parts.

DESIGN

- Design with 2 strong bipolar systems for the stop bar, for reliable alignment of the parts. The stop magnet works at a time offset to the base magnet
- The stop bars are magnetised before the main chucking area. This reliably pulls the workpiece into the lower corner of the stop.
- Pole plate with particularly narrow, continuous longitudinal pole pitch, 3 mm steel and 1 mm brass
- Pole divisions bonded and additionally bolted together solidly with tie rods
- High accuracy thanks to pole plates bolted in a narrow grid
- Switch-off using demagnetising cycle
- 8 mm wear layer on the pole plate
- Low magnetic field height of 4 mm
- Electro-permanent magnetic system for absolute safety in case of power failure
- Chucking slots on both face sides
- Reinforced systems for high wear possible on request
- Length over 1000 mm with through holes for fastening upon agreement
- Robust and water-tight
- Protection rating IP 65

RATED HOLDING FORCE

100 N/cm². Controllable with control unit

RATED VOLTAGE, RECOMMENDED 360 V IMP

APPLICATION

Primarily for precise grinding of mass-produced parts, especially in shift operation. For toolmaking, the system allows precision machining to the µm relative to the reference edge against the stop.

- Magnetically active stops automatically controlled in sequence
- For thin workpieces up to: min. thickness = 12 mm (depending on stop height)

For flat workpieces:

min. width = 40 mm

- **SCOPE OF DELIVERY** • 1 or 2 magnetic stop bars
- 3 m connecting cable on right short side, rear
- On request with water-tight heavy-duty power connector
- Larger magnetic chucks are provided with lifting lugs for transport
- Control and hand remote unit not in the scope of delivery
- Clamps

FACE AND CONTOUR MACHINING OF THIN WORKPIECES, WELD SEAM PREPARATION

 $S^{\}$

SELECTION CRITERIA

 Low field height with high holding forces for pulling down thin parts

MACHINING EXAMPLE

- Workpiece: 200 x 80 x 15 mm
- Material: St 52-3
- Feed rate: 1400 mm/min
- Cutting depth: 15 mm
- No. of teeth: 4
- Machining volume: 135 cm³/min

POCKET AND WINDOW MILLING

SELECTION CRITERIA

- Low magnetic field
- High holding forces
- Good swarf discharge

MACHINING EXAMPLE

- Workpiece: 400 x 400 x 80 mm
- Material: 16 MnCr5
- Feed rate: 800 mm/min
- Cutting depth: 15 mm
- No. of teeth: 6
- Machining volume: 530 cm³/min

MACHINING FROM 5 SIDES

SELECTION CRITERIA

- High holding forces
- Access from 5 sides
- Low-deformation chucking

MACHINING EXAMPLE

- Workpiece: 500 x 500 x 60 mm
- Material: 16 MnCr5
- Feed rate: 2000 mm/min
- Cutting depth: 6 mm
- No. of teeth: 6
- Feed: 10 mm
- Machining volume: 650 cm³/min

SELECTION CRITERIA PRODUCTS Energy-independent SAV 220.79 SAV 220.31

PALLETISING HSC MACHINING

- Low field height
- Operational safety
- Precision

MACHINING EXAMPLE

- Workpiece: 150 x 150 mm
- Material: 16 MnCr45, HRC 52
- Feed rate: 2500 mm/min
- Cutting depth: 1 mm
- No. of teeth: 4
- Machining volume: 50 cm³/min

RAIL MILLING

SELECTION CRITERIA

- Extreme air gap characteristics
- High holding forces
- Extremely robust and wear-resistant

MACHINING EXAMPLE

- Workpiece: UIC 60
- Material: Rail steel
- Machining cross-section: 40 × 35 mm
- Machine output: up to 130 kW

0

Milling magnet also for hard machining. Amplified magnet system with demagnetising cycle. Optimised system for high holding forces. Magnetically fully saturated system thanks to flux concentration. Design SAV 220.76 square (pallet), Design SAV 243.76 rectangular.

SAV 220.76 Pole pitch 35, 65

SAV 243.76 Pole pitch 35, 65, 85

DESIGN

- System for optimised holding force with demagnetising cycle
- Complete surface magnetically active, no "dead zones"
 Solid monoblock design
- Solid monoblock design
 Electro-permanent magnetic system for absolute safety in case of power
- failure.
- With heavy-duty power connector at front right
- Pole gap with brass, wear-protected
- 8 mm wear layer on the pole plate
- Optionally with grid thread drilling template for pole bars or pole shoes possible (M)
- Pole pitch 65 mm and 85 mm optionally with T-slots DIN 650-10H10 (T)
- Chucking slots on the short sides
- Square versions SAV 220.76 optionally with zero point workholding system upon agreement
- Robust and water-tight
- Protection rating IP65

RATED HOLDING FORCE

 $\begin{array}{l} 80 \ \text{N/cm}^2 \ \text{with} \ \text{P} = 35 \ \text{mm} \\ 100 \ \text{N/cm}^2 \ \text{with} \ \text{P} = 65 \ \text{mm} \\ 160 \ \text{N/cm}^2 \ \text{with} \ \text{P} = 85 \ \text{mm} \end{array}$

Controllable with control unit

RATED VOLTAGE, RECOMMENDED 360 V IMP

APPLICATION Heavy machining

Heavy machining also on pallet changing systems. With demagnetising cycle, therefore also suitable for higher alloy materials or hardened materials.

 For workpieces up to min. thickness x: 8 mm with P = 35 mm
 20 mm with P = 65 mm
 32 mm with P = 85 mm

 For flat workpieces min. a: 70 mm x 70 mm with P = 35 mm 130 mm x 130 mm with P = 65 mm 180 mm x 180 mm with P = 85 mm

SCOPE OF DELIVERY

- With heavy-duty power connector as an option
- Adaptation for zero-point system upon agreement (surcharge applies)
- Larger magnets are provided with lifting lugs for transport
- Robot flanges on request
- Clamps

ORDERING EXAMPLE Designation

SAV 243.77-RAIL

ELECTRO PERMANENT MAGNETIC SYSTEM

Chucking at bridge and base, on one side – for machining rails and railway points

APPLICATION OPTIONS

For heavy machining of the running faces, feet and fishplate seating of rails. The one-part or two-part magnet system allows lateral alignment in the first step (F_A) . Then the main magnet is activated in the base (F_H) .

DESIGN

- Dual high-energy magnet system
- Holding forces in the physically possible maximum range
- The magnet system with great depth action bridges even larger air gaps up to 10 mm
- Solid monoblock design
- Pole gap with brass, wear-protected

RATED VOLTAGE, RECOMMENDED 360 V IMP

RATED HOLDING FORCE

195 N/cm² on inducible steel surface

LATERAL CHUCKING ON THE WEB 1 row

DESIGN

- Milling of running faces and feet
- 1-row version
- Side stop also as exchangeable pole bar for alternative head/web stop

F_A for lateral alignment of the workpieces. F_H generated by base magnet in the second step

LATERAL CHUCKING ON THE WEB 2 row

DESIGN

- Milling of running faces and feet
- 2-row version

F_A for lateral alignment of the workpieces. F_H generated by base magnet in the second step.

LATERAL CHUCKING ON THE FOOT 2 row

DESIGN

- Compact design suitable tongue and regular profiles
- Pole gap with brass, wear-protected

 F_{A} for lateral alignment of the workpieces. F_{H} generated by base magnet in the second step

SAV 243.78

ELECTRO PERMANENT MAGNETIC CHUCKS With universal round pole pitch <u></u>

For large-area, thin parts, e.g. for widening weld seams.

DESIGN

- Steel pole diameter 60 mm
- Design with linear (A) or offset (B) pole grid
- Larger systems as combination of several magnets
- Complete surface magnetically active also for direct placement
- Solid monoblock design with demagnetising cycle
- Robust and water-tight
- Protection rating IP 65
- Electro-permanent magnetic system for absolute safety in case of power failure
- System on the underside of the machine table magnetically isolated to protect drive and measuring systems
- Pole gap also available in solid brass on request (surcharge applies)
- Tapped hole grid M8 for optional pole shoes
- 12 mm wear layer on the pole plate
- Table fastening size 600 x 300 with 2 clamps on the edge
- Table fastening size 600 x 400 to 1000 x 500 with 4 clamps on the edge
- Table fastening size 1000 x 500 with through holes on request
- Electrical connection up to size 1000 x 500 with heavy-duty power connector, permanent connection for larger sizes
- Fastening with through holes on request
- Threaded holes for round poleshoes as an option (M)

RATED HOLDING FORCE

- When using pole raisers: 3200 N/pole
- For direct placement: 900 kN/m²

RATED VOLTAGE 360 V IMP

APPLICATION

- For chucking thinner plates, e.g. weld seam preparation and for milling of hard parts and higher alloyed materials. Please contact us for more information
- Amplified magnet system with demagnetising cycle, also suitable for hard milling
- Universal for a variety of different part geometries 5-side machining possible when using pole shoes (mobile and fixed) to create free space for tools
- Suitable for medium and large-surface systems
- Round version available on request
- For workpieces:
 Min. thickness = 8 mm

 For flat workpieces: Min. size = 200 x 200 mm

SCOPE OF DELIVERY

- Up to 525 mm width with 2 clamps, with 4 clamps for larger widths
- 3 m connecting cable, protective hose optionally possible
- Includes lifting plates
- Control and control unit not included (see SAV 876.17)
- Clamps

ELECTRO PERMANENT MAGNETIC CHUCKS

Universally suitable system with hexagonal pole pitch

Milling magnet for flexible use with high holding force.

DESIGN

- Optimised high-energy magnet system
- Low height · Electro permanent magnetic system for absolute safety in case of power failure.
- Tapped hole grid M8 for optional pole shoes
- Protection rating IP 65
- 8 mm wear layer of the pole plate

RATED HOLDING FORCE

- On workpiece: 150 N/cm²
- Per pole pair: 900 daN

RATED VOLTAGE

360 V IMP

APPLICATION

For milling, especially for universal machining with high level of material removal

- HSC milling
- Also suitable for larger air gaps
- Min. thickness of the workpiece: 12 mm
- Min. workpiece size: 100 x 100 mm

The magnetic chucking and the free side access allow 5-sided machining with pole shoes SAV 248.70.

SCOPE OF DELIVERY

- Up to 400 mm width with 2 clamps, with 4 clamps for larger widths
- 3 m connecting cable, protective hose optionally possible
- Includes lifting plates Control and control unit not included (see SAV 876.17)
- Clamps

 \bigcirc

Special version for pallets on 5-axis machine

ELECTRO PERMANENT MAGNETIC CHUCKS With square pole pitch

Milling magnet for universal use. Full metal pole surface with high capacity at low cost.

DESIGN

- Pole plate with 50 mm square pole size
- Full metal pole plate without epoxy resin as an option (VME) for optimum sealing. Wear protection even for hot swarf.
- Version with epoxy resin (EPX)
- Wear layer on the pole plate: 1 mm to steel insulation
- 5 mm to functional barrier in the epoxy
- Available with tapped hole grid M8 for using pole shoes SAV 248.70
- Electrical connection with heavy-duty power connector
- Table fastening with through holes or with clamps

RATED HOLDING FORCE

- Epoxy: 3500 N/pole (VME)
- Full metal: 3150 N/pole (EPX)

RATED VOLTAGE 360 V IMP

APPLICATION

For milling, universal applications

- Min. thickness of the workpiece: 13 mm
- Min. workpiece size: 120 x 120 mm

APPLICATIONS

We design and manufacture electro permanent magnetic vertical chuck individually and in any size.

Also as a pallet solution and with top tooling adapted to your workpiece.

 $S^{\}$

Ask us about your application. We examine the possible machining parameters. Also with individual and customised written calculation tools for each case.

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCKS With radial pole pitch

A strong magnetic field is the special feature of our circular magnets. The magnetic force is generated by the permanent magnets which are magnetised and demagnetised with short current pulses.

DESIGN

- Solid pole plate
- Switch-off using demagnetising cycle
- Electro permanent magnetic system for absolute safety in case of power failure
- High accuracy thanks to pole plates bolted in a narrow grid
- Pole plate with brass, wear-protected
- Pole plate can be replaced when worn
- The radial pole positioning is particularly suitable for using pole raisers. This prerequisite is absolutely required for the runout of the tool or the grinding wheel in case of 3-sides machining. Version with T-slots (T) as per DIN 650-10^{H10} are available for this
- 8 mm wear layer on the pole plate
- Protection rating IP 65
- Available with flange on request (see SAV 248.90 to 248.94, chapter 1.2.1)

RATED HOLDING FORCE

120 N/cm², controllable with control unit

RATED VOLTAGE, RECOMMENDED

210 V IMP up to size A = 400 **360 V IMP** above size A = 400

APPLICATION

Primarily for precise grinding of small to large workpieces on rotary table and cylindrical grinding machines. Also suitable for turning applications.

- Same pole pitch on the circumference, therefore suitable for ring-shaped workpieces
- · For workpieces up to min. width equivalent to 35 % pole pitch on the pitch circle diameter

$$= \frac{\pi}{4} \cdot \frac{d_i + d_a}{P} \quad ; B_{WKPC} > 0.35 \times P$$

Also for thin rings

SCOPE OF DELIVERY

- Larger circular magnets are provided with threads for transport
- Standard version without T-slots and pole raisers
- Standard electrical connection centrally on the rear side using terminals • Alternatively with integrated flat slip ring assembly for larger diameters from 1000 mm
- Available with water-tight heavy-duty power connector on the outer circumference on request
- Control and hand remote unit not in the scope of delivery

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCKS Amplified magnet system with radial pole pitch and extra high holding force

Thanks to the use of special magnet materials, this new type of circular magnets develops an extremely high holding force. Magnetising and demagnetising is achieved with a short direct current pulse. The homogeneous and precise design of the circular magnet allows hard turning and extreme material removal during turning.

DESIGN

- Uniform, strong magnetic field
- Solid pole plate
- Switch-off using demagnetising cycle
- · Electro permanent magnetic system for absolute safety in case of power failure
- High accuracy thanks to pole plates bolted in a narrow grid
- Pole plate with brass, wear-protected
- Pole plate can be replaced when worn
- The radial pole positioning is particularly suitable for using pole raisers. This prerequisite is absolutely required for the runout of the tool or the grinding wheel in case of 3-sides machining. Version with T-slots (T) as per DIN 650-10^{H10} are available for this
- 8 mm wear layer on the pole plate
- Protection rating IP 65
- Available with flange on request (see SAV 248.90 to 248.94, chapter 1.2.1)

RATED HOLDING FORCE:

170 N/cm², controllable with control unit

RATED VOLTAGE, RECOMMENDED: 360 V IMP

APPLICATION

Hard turning and extreme material removal for turning applications on small and large workpieces. Grinding with maximum precision.

- Same pole pitch on the circumference, therefore suitable for ring-shaped workpieces
- · For workpieces up to min. width equivalent to 35 % pole pitch on the pitch circle diameter

$$P = \frac{\pi}{4} \cdot \frac{d_i + d_a}{P_p} \quad ; B_{WKPC} > 0.35 \times P$$

Also for thin rings

SCOPE OF DELIVERY:

- Larger circular magnets from 25 kg upwards are provided with threads for transport
- Standard version without T-slots and pole raisers
- Standard electrical connection centrally on the rear side using terminals Alternatively with integrated flat slip ring assembly for larger diameters
- from 1000 mm Available with water-tight heavy-duty power connector on the outer circumference on request
- Control and hand remote unit not in the scope of delivery

POLE RAISERS

APPLICATION

Hard turning of thin rolling bearing rings on 3 sides with fixed and movable pole raisers.

DESIGN

- Pole raisers in segmented design offer the option of a free-running tool for 3-sided machining of thin rings
- The radial adjustment option covers a larger diameter range
- Can be provided with machining for uneven workpieces or for through holes
- Depending on the rigidity of the workpiece, spring-loaded pole shoes for uneven contact surfaces are also possible
- The pole shoes for circular magnets have to be adapted individually
- We can dimension and manufacture pole raisers for customised solutions on request

Rigid pole raisers with alignment collar

Rigid pole bars for 3-point contact

Movable pole raisers

LAMINATED TOP PLATE

- No loss of workpiece contact surfaces
- Good holding forces even for smaller diameters
- Easy to exchange
- Good swarf discharge, easy to clean
- Mounting of pole shoes outside of the machine
- Pole plate change can be automated
- Also with T-slots for pole raisers

 $S \wedge V$

POLE BEAMS

- As wear protection for the magnet pole plate
- Easy to clean
- With T-slots on request
- Toothing for alignment of heavy rings possible

LAMINATED TOP RINGS

- Up to 650 mm diameter
- No loss of workpiece contact surfaces
- Good holding forces even for smaller diameters
- Easy to exchange
- Cost-efficient

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCKS With circular pole pitch

The circular magnets with circular pole pitch allow several workpieces to be chucked off-centre. The strong magnetic field is distributed evenly across the pole plate.

DESIGN

- Pole pitch manufactured "gap-free"
- Uniform, strong magnetic field
- Solid pole plate
- Switch-off using demagnetising cycle
- · Electro permanent magnetic system for absolute safety in case of power failure
- High accuracy thanks to pole plates bolted in a narrow grid
- Pole plate with brass, wear-protected
- Pole plate can be replaced when worn
- 8 mm wear layer on the pole plate
- Protection rating IP 65
- Available with flange on request (see SAV 248.90 to 248.94, chapter 1.2.1)

RATED HOLDING FORCE

100 N/cm², controllable with control unit

RATED VOLTAGE, RECOMMENDED

210 V IMP up to size A = 500 **360 V IMP** above size A = 500

APPLICATION

Primarily for precise grinding of small to large workpieces on rotary table and cylindrical grinding machines. The circular pole pitch also allows machining of multiple parts which are not placed centrally.

- Circular pole pitch ensures even distribution of holding force on the circumference. This makes it suitable for thin, flat parts (e.g. saw blades).
- Placement of multiple parts on pitch circle diameter possible
- For workpieces up to min. thickness x: 2 mm with P = 5.5 mm4 mm with P = 9 mm8 mm with P = 18 mm
- For flat workpieces: Min. size = $45 \text{ mm} \times 45 \text{ mm}$

Not suitable for thin rings

SCOPE OF DELIVERY

- Larger circular magnets are provided with threads for transport
- Standard electrical connection centrally on the rear side using terminals Alternatively with integrated flat slip ring assembly for larger diameters
- from 1000 mm Available with water-tight heavy-duty power connector on the outer
- circumference on request
- Control and hand remote unit not in the scope of delivery

Larger diameters, e.g. 5.5 m, available on request. Allocation to the correct control unit is based on the max. power consumption, SAV 876.17.

Designation Electro permanent magnetic circular chuck

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCKS With parallel pole pitch 4 mm

Circular magnet with fine pole pitch for thin parts. Centre also magnetically active.

DESIGN

- Pole plate with particularly narrow, continuous pole pitch, 3 mm steel and 1 mm brass
- Low height
- Pole divisions bonded and reinforced with tie rods
- High accuracy thanks to pole plates bolted in a narrow grid
- Low field height of 4 mm
- Switch-off using demagnetising cycle
- Housing annealed without stress
- Fastening hole pattern with threads at the rear or through holes upon agreement
- · Electro permanent magnetic system for absolute safety in case of power failure
- 8 mm wear layer on the pole plate
- Protection rating IP 65

RATED HOLDING FORCE

• 100 N/cm², controllable with control unit using holding force coding switch

RATED VOLTAGE, RECOMMENDED 360 V IMP

APPLICATION

Grinding thin plates, wide rings with low thickness and min. widths of 40 mm.

- Suitable for placement of several small parts
- For workpieces up to: min. thickness = 2 mm

 For flat workpieces: Min. size = 40×40 mm

SCOPE OF DELIVERY

- Larger circular magnets are provided with threads for transport
- Standard electrical connection centrally on the rear side using terminals
- On request with water-tight heavy-duty power connector
- Control and hand remote unit not in the scope of delivery

| DESIGN Even, extremely strong magnetic field through dual high-energy system Solid pole plate Pole gap with full brass Electro permanent magnetic system for absolute safety in case of power failure | AF Tur |
|---|-----------|
| Also for thinner, disc-shaped workpieces Centre fully magnetically active 8 mm wear layer on the pole plate Protection rating IP 65 Available with flange on request (see SAV 248.90 to 248.94, chapter 1.2.1). | - |
| RATED HOLDING FORCE | sc • |

• 150 N/cm², controllable with control unit

RATED VOLTAGE, RECOMMENDED 360 V IMP

SAV 244.74

With parallel pole pitch 28 mm, extremely high holding force

Extremely high holding forces through high-energy systems with low field heights. Magnetising and deactivation are achieved with short current pulses.

 $\widehat{}$

PPLICATION

urning of thinner plates with high level of material removal

Also suitable for flat workpieces thanks to parallel pole pitch; note magnetically active length H

For workpieces with: min. thickness = 8 mm

For flat workpieces: Min. size = 50×50 mm

COPE OF DELIVERY

Larger circular magnets are provided with threads for transport Standard electrical connection centrally on the rear side using terminals

 Available with water-tight connector on the outer circumference on request

Control and hand remote unit not in the scope of delivery

COMBINED CIRCULAR CHUCKS Radial pole pitch and integrated jaw chuck

 \bigcirc

Combination of magnetic and mechanical workholding

The innovative combination of magnetic workholding with a centring chuck – a complete system solution from a single source

ADVANTAGES

- Reproducible centring
- Reliable process
- Option for combining first and second chucking
- Compact design (height from 170 mm)

DESIGN OF MAGNET SYSTEM

- Combination/hybrid magnet chuck type SAV 224.76 with electro permanent magnetic principle, magnet system with amplified design, holding forces on inducible area up to 170 N/cm²
- Full metal pole plate with brass insulation and T-slots as per DIN 650-10^{H10} for mounting fixed and movable pole raisers
- 8 mm wear layer on the pole plate, can be replaced after many years of use and wear
- On request with heavy-duty power connector integrated into the circumference and as a quick-release coupling

RATED HOLDING FORCE

170 N/cm², controllable with control unit

RATED VOLTAGE, RECOMMENDED 360 V IMP

DESIGN EXAMPLE FOR CENTRING CHUCK

- Power chuck SAV 260.20
- Centring accuracy of the chuck: 0.02 mm, centring range from: 450 - 1200 mm,
- magnetic chucking range from: 500 1100 mm
 Chuck equipped with brushed long-size base jaws, a chucking range of
- 500 1200 mm can be centred without gaps
 Holding force of the chuck: 180 kN at 210 Nm
- Travel per jaw: 9.6 mm
- Actuation of the jaw unlocking on the centring chuck with a control rod
- Spindle with precision bearing and sealing

SPECIAL FEATURE

- Resistant to emulsions as per IP 65
- Can be controlled with machine spindle using rotary transmitter
 Control with demagnetising cycle and eight holding force levels for pre-selection
- System with potential-free switching to the enable signals, complete integration into the machine controller possible; plug-in version with parking station for connector check and enable

APPLICATIONS

 $S^{\}$

We manufacture large magnets for rolling bearing machining with grinding and hard turning. For example 4.3 m diameter consisting of 2 segments. Flat slip ring assembly integrated into the centre.

PERM

1.2.1

ELECTRONIC POLARITY-REVERSING CONTROL UNIT SAV 876.17

With integrated microcontroller and holding force control

APPLICATION

For electro permanent magnetic systems with 210 V or 360 V magnet voltage 30 A IMP max. magnetic voltage. Also suitable for retrofitting. Control with hand remote unit SAV 876.02-SE3, control elements integrated or machine-side PLC signals.

FUNCTION

- As pulse control for magnetising electro permanent magnetic chucks
- Control of the demagnetising cycle
- Optimised for all SAV electro permanent magnetic chucks
- Monitoring of the mains voltage, the own power components and all cables, including the magnet coil. Some internal components with redundant design
- Machine enable with dual-channel safety contact
- Chucking and releasing using redundant input signals with feedback after completed magnetising and demagnetising
- Holding force regulations using inverse BCD coding, 8 or 16 levels

PERFORMANCE CHARACTERISTICS

- Small and compact
- Easy to integrate into any machine
- User-friendly with LCD plain text display in English/German
- Easy menu selection using film keypad
- Chokes and filters are integrated
- Signal inputs and outputs indicated by LEDs
- Connectors for signal inputs and outputs
- Magnet connection with potential-free switching
- Reliable and safe operation
- Version in box with main switch, terminal strip and circuit breaker

ADVANTAGES

- Short-circuit resistant
- Fully electronic control and power board
- Additional potential-free switching relay for magnetic connection
- Extended diagnostics
- Earth connection test
- Very compact design
- Pre-programmed settings
- Individual programming options
- Short demagnetising period
- High demagnetising quality for single magnet systems
- Automatic supply frequency detection
- Function design and user guidance
- Developed based on TÜV criteria regarding electrical and functional safety as well as operational stability and EMC

CONFORMITY AS PER DIRECTIVES

SAV

DE CONTROLUNIT

- 2014/35/EU Low Voltage Directive
- 2014/30/EU Electromagnetic Compatibility Directive
- 2011/65/EU RoHS

OPERATIONAL SAFETY

- Category 2
- Performance level c
- MTBF is 30.45 years

OPTIONAL

The control unit in the control box can be equipped with a heavy-duty power connector. Socket with cap on the magnet, 5 m cable with connector on the control unit. Cables and connectors are 8-pin, suitable for control unit sizes of max. 60 A x 2. Ordering designation: SAV 876.12-SS9

OPTIONAL

If control unit and magnet are used for palletising, an optional parking station prevents movement of the pallet while the connector is inserted. Ordering designation: SAV 876.12-PS9

DESIGN

Depth

The control units are available in 2 designs:

- In the control box (S) for use as a separate device together with the control unit SAV 876.02-SE3

If mains voltages deviate from the voltage listed in the technical data, a series transformer (T) may be required. Please contact us for more information.

SAV 876.02 HAND REMOTE UNITS

For actuating polarity reversal control units SAV 876.17

- SE3

DESIGN

To comply with accident prevention regulations on machine tools, it must be ensured that the machine feed is only enabled when the chucking magnet is activated (using auxiliary contacts) and that the activation is monitored with an indicator light. The control units comply with these regulations. The indicator light is integrated into the keys of the control unit. The auxiliary contacts for the machine feed are located in the polarity reversal control unit.

APPLICATION

For switching workholding magnets in conjunction with the electronic polarity reversal control units SAV 876.10 or SAV 876.17. The yellow and green keys are used for switching on. The yellow and red keys are used to initiate the polarity reversal process. Any malfunctions detected by the polarity reversal control units are also indicated by a coded flashing signal in the red key. The holding force can be selected in 8 levels.

HAND REMOTE UNIT TYPE SE3

For holding force control at 8 levels for inverse BCD coding, with integrated indicator lights and a 2 m numbered cable. Additional numbered cable available (surcharge applies).

TECHNICAL DATA

- Housing size (LxWxH): 160 × 80 × 60 mm
- Operating voltage: 24 V
- Protection rating: IP 63
- Protection class: III

SAV 876.02 - SE2

CONTROL ELEMENTS FOR INSTALLATION

CONTROL ELEMENTS TYPE SE2-1 TO SE2-3, **INSTALLATION TYPE**

Consisting of:

2 illuminated push-buttons and coding switch with 8 levels for holding force adjustment with inverse BCD coding Complete set available as type SE2-S.

CARBON BRUSH HOLDERS

For power supply to electro permanent magnetic circular chucks

APPLICATION

bolts.

DESIGN The carbon brush holders shown are used for Bronze grades, spring-loaded. transferring current to the slip ring assemblies. Attached at distance G from the slip ring They are supplied in 3 sizes including fastening assembly.

SAV no. - max. round magnet diameter Designation Carbon brush holder SAV 248.84 - 1600

SAV 248.85

SLIP RING BODIES

For power supply to electro permanent magnetic circular chucks

APPLICATION

Slip ring bodies are used in conjunction with carbon brush holders for power supply to rotating electro permanent magnetic circular chucks. The slip ring body is used for separate installation on the hollow machine spindle.

During mounting, it must be ensured that insulation parts are not wetted with liquids. A contact protection for the live parts on the machine must be provided. Electrical connection with cable lugs against support nut.

FASTENING

- Shrinking at 130 °C
- Pressing with 0.5 mm interference
- Adhesive bonding

DESIGN

Delivery with only one small hole. The locating hole (or thread) must be subsequently machined according to the machine spindle, taking into account maximum dimension E.

CUSTOMER BENEFIT

PRECISION SINE TABLES FOR GRINDING/EDM

- Magnet with high "even" holding force performance
- Large magnetically active area
- Plane parallelism ±0.005 / 100 mm

2

Π

 Additional fastening brace for attachment when positioning the gauge blocks

3

- Fully tightness-tested
- Very flat design

4

- Small angles can also be set with 3 mm gauge block at 0°
- From 300 mm length with 2 gauge block supports for maximum precision

(5)

- Base plate milled from solid material
- Base plate hardened for rigidity and long-term accuracy

6

- Angle accuracy ±5 arc sec
- Axes made of stainless steel
- Precision-ground prism bearing for long-term accuracy
- Low-distortion clamping with the upper bearing shell

7

8

Long stop bar, precision-ground

Stainless steel measuring rollers

SAV 245.01

PRECISION SINE TABLES

Swivelling around the longitudinal axis

DESIGN

With sine table base unit made of steel. Hardened, burnished and precision-ground. Base plate alignment edge parallel to the stop bar. Maximum precision with flat design. Standard design with permanent magnetic chuck.

The sine tables are delivered in a wooden storage box, up to and including size 400 x 200 mm.

With sine table with degrees/minutes in mm, precision length stop and transverse stop bar.

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle.

Clamping is achieved with the upper bearing shell halves.

TECHNICAL DATA

- Angle accuracy: ±5 arc sec
- Plane parallelism: ±0.005/100 mm
- Gauge block at 0°: 3 mm
- Swivelling range: 0° to 45°
- Rated holding force: 90 N/cm²
- Pole pitch: 1.9 mm
- Magnetic field height: 6 mm
- Wear layer of the pole plate: 8 mm

Clamping is achieved with a fastening brace at the side and the upper bearing shells.

TECHNICAL DATA

- Angle accuracy: ±5 arc sec
- Plane parallelism: ±0.005/100 mm
- Gauge block at 0°: 3 mm
- Swivelling range, long axis: 0° to 45°
- Swivelling range, short axis: 0° to 30°
- Rated holding force: 150 N/cm²
- Pole pitch: 15 mm
- Magnetic field height: 12 mm
- Wear layer of the pole plate: 5 mm

SAV 245.09

PRECISION SINE TABLES

Swivelling around longitudinal axis, for the highest requirements

DESIGN

With sine table base unit made of steel. Hardened, burnished and precision-ground. Magnet housing annealed without stress. Maximum precision with flat design. 4-point contact for optimum precision.

Delivered with a lifting aid, rod and sine table with degrees/ minutes in mm.

Precision longitudinal stop with transverse stop bar, 3 m connecting cable, painted magnet housing. Available alternatively with electrical chucks and integrated water cooling for P = 13 (EM) or electro-permanent magnetic chucks for P = 4 (EP).

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle.

TECHNICAL DATA

- Angle accuracy: ±5 arc sec
- Plane parallelism: ±0.005/100 mm
- Gauge block at 0°: 0/5 mm
- Swivelling range: 0° to 45°
- Rated holding force: 100 N/cm²
- Pole pitch:
- 4 mm for EP magnet as per SAV 243.73 13 mm for EM magnet as per SAV 243.42
- Magnet voltage:
- 210 V for EP

24 V or 110 V for EM

 Precision sine table
 SAV 245.09 - 500 x 200 - 4 - EP - 210 V

PRECISION SINE TABLES

Swivelling around longitudinal axis, permanently installed on machine table

DESIGN

With sine table base plate made of steel. Annealed without stress. All structural elements made of steel. Hardened and precision-ground. Sturdy design with high precision. With mechanical adjustment gear or hydraulic swivelling aid, depending on size. Maximum precision with flat design. 4-point contact for optimum safety.

Standard version with electro permanent magnetic chuck as per SAV 243.70. Pole pitch 13, 18 or 25 mm. Delivered with sine table with degrees/minutes in mm, precision longitudinal stop with transverse stop bar, 3 m connecting cable, painted magnet housing, ratchet and socket.

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle.

TECHNICAL DATA

- Gauge block at 0°: 5 mm
- Swivelling range: 0° to 45°
- Angle accuracy: ±5 arc sec
- Plane parallelism: ±0.005/100 mm
- Pole pitch: 13/18/25 mm
- Rated holding force: 90/110/115 N/cm²
- Magnet voltage: 360 V

Other designs and dimensions on request. Also available with electromagnet or other magnet systems. Please state the required magnet when ordering (see chapters 1.2.1, 1.2.2 and 1.2.3).

SAV 245.40

PRECISION SINE TABLE

[also stainless version] swivelling arour

DESIGN

With switchable permanent magnetic chuck block SAV 242.11. With sine table base unit made of steel. Hardened, burnished and precision-ground. Delivered in a wooden storage box with sine table with degrees/minutes in mm. Stainless version (RF) available.

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle. The switchable magnetic chuck block can be removed and can therefore also be used without a sine table.

All four chucking areas of the chuck block are magnetically active.

SAV 245.41

PRECISION SINE TABLE

[also stainless version] Swivelling around the transverse axis

DESIGN

With switchable permanent magnetic chuck block SAV 242.11. With sine table base unit made of steel. Hardened, burnished and precision-ground. Delivered in a wooden storage box with sine table with degrees/minutes in mm. Stainless version (RF) available.

TECHNICAL DATA

- Angle accuracy: ±5 arc sec
- Plane parallelism: ±0.005/100 mm
- Gauge block at 0°: 3 mm
- Swivelling range: 0° to 45°
- Rated holding force: 50 N/cm²
- Rated holding force, stainless: 30 N/cm²

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle. The switchable magnetic chuck block can be removed and can therefore also be used without a sine table. All four chucking areas of the chuck block are magnetically active.

APPLICATIONS

ELECTRO PERMANENT MAGNETIC SYSTEM

With active longitudinal stops on exchangeable top plates for milling of small notched impact test bending samples

SAV 248.01

LAMINATED TOP PLATES

For placing on circular magnets with parallel pole pitch

APPLICATION

For chucking profiled workpieces on magnets

with parallel pole pitch.

DESIGN

Any type and form of profiles can be machined into the chuck blocks (can also be provided by us). Note maximum machining dimension for this. Attaching to a magnet upon agreement. The pole division must run parallel to the base magnet.

SAV 248.02

LAMINATED TOP PLATES

For placing on magnetic chucks with transverse pole pitch

APPLICATION

As top plate for magnets with transverse pole pitch. Can only be used in conjunction with magnetic chuck with parallel divisions. Especially suitable in conjunction with magnetic chuck SAV 243.11 (chuck 1.2.1).

TECHNICAL DATA

• Pole pitch: 3 mm steel, 1 mm brass Profile depth: Max. 8 mm

APPLICATION

SAV 242.05 SAV 242.12

NEODYMIUM MAGNETIC BLOCKS With P = 6 mm transverse pole pitch, neodymium iron boron magnets,

extremely high holding force

APPLICATION

For workpieces which are difficult to chuck, e.g. Ferro-Tic, tungsten carbide with cobalt content, very small workpieces. For fast and easy chucking - also for workpieces with complicated EDM contours or workpieces which are difficult to chuck.

DESIGN

Extremely high holding force using a specially developed process. Sturdy solid steel body. ON/OFF control on the face side. Larger versions also available with force-actuated control mechanism on request. Pole divisions made of 4 mm steel and 2 mm brass with NdFeB magnets in the pole gap.

AS STAINLESS VERSION SAV 242.12

High holding force due to specially developed process. Sturdy solid steel body. ON/OFF control on the face side. Precision-ground version.

Housing, ON-switch and pole grid stainless, poles made of steel.

TECHNICAL DATA

- Rated holding force on inducible steel surface: 180 N/cm²
- Rated holding force: 120 N/cm²
- Magnetic field height: approx. 4 mm
- Wear layer of the pole plate: 3 mm
- Available with adaptation for zero-point workholding system

SAV 243.15

PERMANENT MAGNETIC BEAMS

With transverse pole pitch top and bottom

APPLICATION

As a workholding fixture for holding workpieces on EDM machines and machine tools, for jigs, etc.

DESIGN

Two opposite chucking areas, separate switching. Only available in pairs. Low magnetic field due to fine pole pitch.

ELECTRO HOLDING MAGNETS

SAV 241.29

ELECTRO HOLDING MAGNETS

Flat design

APPLICATION

Due to the extremely low height, these chucks are primarily used in handling applications. The magnet is active when switched on and is used for holding ferromagnetic workpieces. To achieve the rated holding force, the steel surfaces of the contact side must be fully covered by the workpiece.

DESIGN

The chucks consist of an electro magnetic holding system. Depending on the area of application, the applicable accident prevention regulations must be observed. For devices of protection class 1, the user must ensure the PE connection as per VDE 0100 par. 6.

TECHNICAL DATA

The technical information (chapter 1.4) must be observed when using the devices.

- Rated voltage: 24 V DC
- Duty cycle: 100 % duty cycle
- Protection rating: IP 65 (as per DIN 40050)
- Insulation material class: E

SAV

SAV 241.31

ELECTRO HOLDING MAGNETS In two connection types

APPLICATION

Electro holding magnets provide workholding of ferromagnetic workpieces. Their use can offer substantial benefits in toolmaking, in production and in the turnaround of small and large bulk parts. To achieve the rated holding force, the steel surfaces of the contact side must be fully covered by the workpiece.

TECHNICAL DATA

The max. holding forces FH are provided for steel 1.0037 and refer to the optimum workpiece density with an air gap $\delta L = 0$ mm and 100 % coverage of the contact surface at 90 % of the rated voltage and at operating temperature (approx. 70 K overtemperature without additional heat dissipation).

If different conditions apply to the application, the holding force will be lower.

- Rated voltage: 24 V DC
- Duty cycle: 100 % duty cycle
- Insulation material class: E

Electro holding magnet SAV 241.31 - A 01

INFORMATION ON TECHNICAL DATA:

The max. holding forces are stated for steel 1.0037 and refer to the optimum workpiece thickness with an air gap of $\delta L = 0$ mm and 100 % coverage of the contact surface. The values are listed for 90 % rated voltage and at operating temperature (approx. 60 K overtemperature without additional heat dissipation).

If different conditions apply to the application, the rated holding force is reduced (see Technical information, chapter 1.4). For safety reasons, a safety factor should be used depending on the application.

The table values for the rated capacity are maximum values for determining the electrical accessory parts and refer to 20 °C excitation winding temperature at rated voltage (VDE 0580/10.70 § 9.1). During operation, the rated power reduces depending on the proportional duty cycle.

The chuck is fastened from the front using cheese-head screws.

ELECTRO MAGNETIC BARS

With high holding forces

APPLICATION

Type C devices are suitable for holding parts with flat surfaces, while type D devices can be used for parts with uneven or scaled surfaces. To achieve the rated holding force, the steel surfaces of the contact side must be fully covered by the workpiece.

DESIGN

The electro magnetic bar chucks are direct-current workholding systems. The magnet is active when switched on and is used for holding ferromagnetic workpieces. Tapped holes are provided on the underside for fastening. 2 easily accessible screws inside the device are provided for the electrical connection. In addition, a PG gland is provided for attaching a strain-relieved cable. This gland can be screwed in either from the side or from underneath. When working with electromagnetic bar chucks, the corresponding accident prevention regulations must be observed depending on the application.

TECHNICAL DATA

- Rated voltage: 24 V DC
- Insulation material class: E
- Protection rating: Device IP 53 (as per DIN 40050 connection IP 00)
- Duty cycle: 100 % duty cycle

INFORMATION ON TECHNICAL DATA:

The table values for the rated capacity are maximum values for determining the electrical accessory parts and refer to 20 °C excitation winding temperature at rated voltage (VDE 0580/10.70 § 9.1). During operation, the rated power reduces depending on the proportional duty cycle. The pole pitch and its influence on the action principle is described in the technica information. The max. holding forces FH are provided for stee 1.0037 and refer to a plate thickness of > 8 mm for type C and > 10 mm for type D. The forces are listed for an air gap δ = 0 mm and 100 % coverage of the contact surface, 90 % of the rated voltage and at operating temperature (approx. 50 K overtemperature without additional heat dissipation). If different conditions apply to the application, the rated holding force is reduced (see Technical information, chapter 1.4). For safety reasons, a safety factor should be used depending on the application.

SAV 241.40

PERMANENT ELECTRO HOLDING MAGNETS

Electrically deactivated permanent magnets

 S^{A}

APPLICATION

Because the permanent electro magnetic workholding system is active when the device is de-energised, these chucks are preferably used where long holding times are required and no holding force is required only for short periods or occasionally. They are also used as safety magnets in transport systems and lifting gear, as the load is reliably held during a power failure. To achieve the rated holding force, the steel surfaces of the contact side must be fully covered by the workpiece.

DESIGN

The chucks consist of a permanent magnet system for holding ferromagnetic workpieces and an excitation winding which neutralises the magnetic field on the contact surface when activated, allowing the workpiece to be removed or the load to be released. Depending on the application, the applicable accident prevention regulations must be observed.

TECHNICAL DATA

The technical information (chapter 1.4) must be observed when using the devices.

- Rated voltage: 24 V DC
- Insulation material class: E
- Protection rating: Device IP 65 (as per DIN 40050)
- Duty cycle: 25 % duty cycle with a cycle time of < 2 min or 40 % duty cycle with a cycle time of < 0.5 min

A reliable deactivation of the permanent magnet system is achieved if the stated values for the duty cycle and cycle time are observed and at a rated voltage of +5 % or -10 %. This ensures reliable releasing of the magnetically held parts. The occurring residual force is then max. 3 % of the rated holding force. During continuous operation, this chuck is not thermally overloaded. The overtemperature of the excitation winding occurring during this process, however, increases the residual holding force.

The relative duty cycle is:

rel. duty cycle = $\frac{\text{duty cycle}}{\text{Cycle time}} \bullet 100 \%$

PERMANENT ELECTRO HOLDING MAGNET

Electrically deactivated permanent magnet

APPLICATION

Because the permanent electro magnetic workholding system is active when the device is de-energised, these chucks are preferably used where long holding times are required and no holding force is required only for short periods or occasionally. They are also used as safety magnets in transport systems and lifting gear, as the load is reliably held during a power failure. To achieve the rated holding force, the steel surfaces of the contact side must be fully covered by the workpiece.

DESIGN

The chucks consist of a permanent magnet system for holding ferromagnetic workpieces and an excitation winding. When activated, the excitation winding neutralises the magnetic field on the contact surface and the workpieces can be removed/released. If the excitation winding is switched concordantly, the rated force increases. Depending on the area of application, the applicable accident prevention

regulations must be observed.

TECHNICAL DATA

The technical information (chapter 1.4) must be observed when using the devices.

- Rated voltage: 24 V DC
- Insulation material class: E
- Protection rating: Device IP 65 (as per DIN 40050)
- Duty cycle: 100 % duty cycle

INFORMATION ON TECHNICAL DATA:

The max. holding forces are stated for steel 1.0037 and refer to the optimum workpiece thickness with an air gap of $\delta L = 0$ mm and 100 % coverage of the contact surface. The values are listed for operating temperature. No thermal overload occurs with continuous operation. The occurring overtemperature, however, increases the residual holding force.

If different conditions apply to the application, the rated holding force is reduced (see Technical information, chapter 1.4).

For safety reasons, a safety factor should be used depending on the application.

The table values for the rated capacity are maximum values for determining the electrical accessory parts and refer to 20 °C excitation winding temperature at rated voltage (VDE 0580/10.70 § 9.1). During operation, the rated power reduces depending on the proportional duty cycle.

SAV 531.01

APPLICATION

For lifting and transporting loads up to 2000 kg. Manually actuated magnets for individual use.

SPECIAL FEATURES

- Powerful neodymium magnets offer maximum carrying capacity on uneven and rough contact surfaces.
- SAV lifting magnets are tested individually and delivered with a test certificate.
- The pull-off force is at least triple the carrying capacity
- The carrying capacity for round materials is at least 50 % of the load bearing capacity for flat materials
- Easy-to-operate lever with safety interlock
- Compact, robust and reliable

APPLICATIONS

- Loading and unloading of machine tools
- Handling of bars and profiles in the warehouse
- Handling of panels, tubes, bars and profiles in steel construction

BATTERY LIFTING MAGNETS

APPLICATION

For lifting and transporting loads up to 5000 kg without power supply. Autonomous electro magnet for individual use with infrared control.

SPECIAL FEATURES

- Robust steel housing with control and charging unit and maintenance-free 12 V battery.
- A switch on the lifting eye prevents switching off during the lifting process
- Loading level indicator, optical/acoustic alarm signal for undercurrent and low battery capacity
- Activation is blocked if the battery voltage is low
- Operation with infrared control with 10 m range or on the magnet
- Modern electronics with short reaction time
- Delivery includes battery, infrared transmitter, operating instructions and test certificate
- Complies with European directives and standards
- With variable holding force and function for dropping thin plates so the rest can be transported safely; operated with infrared remote control
- BM model flat version with one or two magnets for lifting flat materials. BM model designed for sheet metal up to 6000 x 3000 mm.
- BMP model with prism and deep magnetic field for lifting profiles, tubes and round materials

APPLICATIONS

- In steel construction and at shipyards for transporting sheet metal and profiles:
- Loading and clearing flame cutting or laser cutting machines - Loading and unloading of machine tools
- For material handling in the steel trade
- Transport of heavy moulds, cast and forged parts

For crane lifting of workpieces which can no longer be transported by hand

DESIGN

Sturdy design with hand lever for easy releasing of the workpieces (sheet metal, etc.). Both types are suitable for horizontal and vertical lifting. Particularly suitable for lifting sheet metal from 4 mm thickness.

DEMAGNETISERS AND ACCESSORIES

SAV 890.02

TABLE DEMAGNETIZERS Standard device

SAV 890.43

For automatically demagnetising large-area, thin-walled parts

APPLICATION

The demagnetisers are suitable for use in measuring rooms, workshops and production lines and have a strong action for demagnetising bearing rings, dies, swages and other tools.

TECHNICAL DATA

- Power supply: 230 V/50 Hz AC
- Protection rating: IP 20
- Duty cycle: 100 duty cycle
- Power consumption: max. 920 W
- Penetration depth: approx. 50 mm

D

SAV 890.42

TUNNEL DEMAGNETISER For demagnetising large-area, thin-walled parts

APPLICATION

Α

Designation

An interfering residual magnetism can remain in steel and cast workpieces after machining. If these parts have to be demagnetised for other purposes, this can usually be easily achieved with the tunnel demagnetisers.

DESIGN

Demagnetising coil cast in polyurethane, optionally with low-frequency generator for workpieces which are difficult to demagnetise.

TECHNICAL DATA

- Protection rating: IP 55
- Power supply: 400 VAC
- Supply frequency: 50 to 60 Hz
- Other voltages on request

APPLICATION

For automatic demagnetising on the production line with continuous plastic transport belt and drive motor.

The workpieces are moved through the tunnel with a speed of approx. 0.2 m/s. A low-frequency generator can be used as a ballast unit for parts which are difficult to demagnetise.

DESIGN Demagnetising coil cast in polyurethane, optionally with low-frequency generator for workpieces which are difficult to demagnetise. Belt and table versions upon agreement or

SAV 878.05

TESLAMETER

Compact device with large measuring range

APPLICATION

For measuring residual remanence on workpieces and tools, in holes and gaps. Suitable for micro magnetic fields and very strong fields. For measuring magnetic flux densities and the field distribution on magnetic chucks.

DESIGN

Lightweight and compact design. Housing protected against dirt. Energy-saving function for long battery life. Liquid crystal display (LCD) with digital measured value output. If the sensor is worn, it can easily be reordered and replaced (SAV 878.05 - S).

TECHNICAL DATA

- Display either in Tesla (T) or Gauss (G)
- Static and dynamic measurements
- Maximum value display for dynamic
- measurements
 - Magnetic pole indicator N/S
 - Zero-point adjustment
 - Measuring range for static fields: 0 – 1500 mT
 - Measuring range for dynamic fields: 0 – 750 mT
 - Measuring accuracy: ±5 %
 - service temperature: 0 40 °C
 - Dimensions: 150 x 150 x 25 mm
 - Weight: 0.25 kg

ORDERING EXAMPLE SAV no. Designation Manual demagnetiser SAV 890.71

SAV 486.04

GAUSS POCKET MAGNETOMETER For fields with low flux density

APPLICATION

For detecting remanence on workpieces and tools as a pole indicator.

CAUTION

The device is only intended for identifying residual fields and must not be exposed to a concentrated magnetic field.

TECHNICAL DATA

- Measuring range: ±50 G (±5 mT)
- Diameter: 65 mm
- Weight: 0.14 kg

PERMANENT MAGNETIC JOINT

Magnetic aid for welding and assembly

APPLICATION

As a welding aid for holding sheets, flat iron, etc. To avoid overloading the magnetic joint thermally, we recommend using the magnetic aid only for the tack welds and then removing it.

DESIGN

Two permanent magnet chucks connected with struts. Any angle can be set. Can be clamped with two wing nuts. Delivered individually (5) or as a joint (G).

SAV 246.50

PERMANENT MAGNET MULTI-ANGLE SETTER

Magnetic aid for welding and assembly with defined angles

APPLICATION

As a welding and assembly aid for frame processing with angles of 180°, 90°, 75°, 60°, 45° and 30°.

If higher holding forces are required, several mitre holders can be stacked. The maximum application temperature of 120 °C should not be exceeded. We therefore recommend using the mitre holders for the tack welds and then removing them.

DESIGN

All edges are magnetic. Provided holes allow easy and fast positioning.

1.2.10

SAV 246.54

APPLICATION

As a welding aid for tubes, round materials, flat iron and profiled iron

As a chucking tool for drilling fixtures.

To avoid overloading the mitre holders thermally, we recommend using the magnetic aids only for the tack welds and then removing it.

DESIGN

Strong magnetic force, with continuous adjustment for aligning the workpieces.

SAV 246.60

PERMANENT MAGNET WELDING BRACKETS

Magnetic aid for welding and assembly with 90°

APPLICATION

For efficient holding of welding parts at a 90° angle. Used for small, lightweight parts to heavy sheets, depending in size. To avoid overloading the welding brackets thermally, we recommend using the magnetic aids only for the tack welds and then removing it.

DESIGN

Sturdy design, both faces are magnetic, easily released by applying pressure from the side. The normal version (N) is intended for workpieces with bright surfaces.

The amplified version (V) is also suitable for workpieces with scaled or dirty surfaces.

The tube version (R) welding brackets are equipped with prism-shaped pole shoes and are therefore particularly suitable for processing round materials and tubes.

The 2-pole (2) magnetic brackets with 2 protruding magnetic bars are designed for the construction of large machinery, steel construction, shipyards, crane construction, etc. A stake attached to both sides facilitates alignment using a hammer. The welding brackets - starting with SAV 246.60 - 116 - are suitable for small, lightweight parts to applications in the construction of large machinery, shipyards, crane construction, etc. finishing with SAV 246.60 - 450.

SAV 246.61

PERMANENT MAGNETIC WELDING BRACKETS

Magnetic aid for welding and assembly with different angles

APPLICATION

For efficient holding of welding parts with different angles. With scale for angles from 45° to 225°. Used for small, lightweight parts to heavy sheets, depending in size.

To avoid overloading the welding brackets thermally, we recommend using the magnetic aids only for the tack welds and then removing it.

DESIGN

Sturdy design, both faces are magnetic, easily released by applying pressure from the side. The normal version (N) is intended for workpieces with bright surfaces.

The amplified version (V) is also suitable for workpieces with scaled or dirty surfaces.

The tube version (R) welding brackets are equipped with prism-shaped pole shoes and are therefore particularly suitable for processing round materials and tubes.

PERMANENT MAGNETIC SHEET FANNERS For separating sheets

APPLICATION

For separating stacked iron and steel sheets during insertion tasks into metal processing machines. The sheets are placed between the magnetic floaters and magnetised with the same poles. This causes

the sheets to repel each other and float freely, which makes them easy to grip.

To prevent jamming of the sheets, the magnet floaters must be positioned so that an air gap of 1 to 2 mm is created.

DESIGN

The strong permanent magnets are installed in a robust steel housing. The tapped holes provided allow the unit to be fastened to fixtures. Delivered individually.

MAGNETIC CORES

Made of AlNiCo 500

DESIGN

Improved magnetic capacity through lengthwise alignment of the crystals. Unshielded magnetic system. Circumference rough, face side polished. Max. service temperature: 400 °C.

MAGNET MATERIAL AlNiCo 500

FASTENING OPTION Glueing, pressing

 S^{A}

MAGNETIC CORES MADE OF SmCo₅

With high rated holding force

_ . . .

DESIGN

The holding magnets are manufactured by sintering. The magnets are hard and brittle and can only be machined while demagnetised.

Max. service temperature: 200 °C Remanence: approx. 850 mT to 930 mT

MAGNET MATERIAL

Glueing, pressing

| DESIGN |

MAGNETIC CORES MADE OF NdFeB

Polymer-bonded, with high rated holding force

DESIGN

Polymer-bonded neodymium iron boron magnets are not sintered like other magnets, but the magnetic powder is mixed with epoxy resin and hot-pressed in moulds. We can machine the compression-moulded standard magnets to customer specifications while demagnetised.

Max. service temperature: 80 °C Remanence: approx. 680 mT Tolerance range: ±0.1 to 0.2 mm

MAGNET MATERIAL

Neodymium iron boron, Nd₂Fe₁₄B Polymer-bonded, isotropic magnetising

NOTE:

The magnetic capacity is not weakened even in case of strong opposing fields. Can be used without surface protection under normal ambient temperatures at a relative humidity of up to 50% (no condensation). Custom dimensions not possible.

ORDERING EXAMPLE Designation SAV no. - type Magnetic core SAV 240.56 - MK 60 - 02 - 05

FLEXIBLE PERMANENT MAGNETS Easy to machine

APPLICATION

Bending produces ring magnets which are used for small DC motors by inserting them into the stator sleeve. Axially magnetised rings or discs can be punched out of strips. Holding magnet bars can be manufactured with excellent holding forces in any length. To achieve this, flexible magnet strips are placed between two flat pieces of iron (sandwich system, see drawing). They are attached using glueing or pressing. Easy to machine with normal tools.

DESIGN

Improved magnetic capacity through lengthwise alignment of the crystals in the magnetic field (anisotropy). Resistant to demagnetising, ageing-resistant.

MAGNET MATERIAL Hard ferrite, polymer-bonded

- Max. service temperature: 85 °C
- Max. bending radius: 8 x thickness
- Hardness: 90 100 Shore
 - Density: 3.7 g/cm³

CHEMICAL RESISTANCE

by mineral oil, weak acid and lye, kerosene and glycol. Slightly affected by nitric acid. Swelling caused by petrol, acetone, alcohol (90%). Dissolved by benzene, chlorinated solvents.

MAGNETIC TAPES Self-adhesive

DESIGN

Improved rated holding force through alignment of the crystals, magnetised on one side. dark brown with smooth surface, can be cut with scissors. The displacement force is approx. 1/3 of the rated holding force.

FASTENING OPTION

Almost non-magnetic rear side with selfadhesive coating.

NOTE

Excellent adhesion on thin metal sheets through multi-pole magnetising.

Max. service temperature: 75 °C Rated holding force: 0.8 N/cm²

OFFICE MAGNETS

TO KEEP YOUR ADVERTISING IN **VIEW AT ALL TIMES...**

Our office magnets can help you to keep your company visible everywhere. The magnets are versatile and attractive. Attach drawings, notifications and plans quickly and reliably, at the office, workshop, public institutions etc.

ALWAYS FIRMLY ATTACHED...

The holding magnets consist of strong magnetic elements in attractive plastic or steel housings. Some of the plastic housings are available printed or with a raised design, to your specifications. You will be sure to find the right version - whether with eye bolt, hook, threaded stud or a simple smooth print.

FREE DESIGN CHOICES...

Prints and raised designs can be implemented based on your design ideas, from a template or with support from SAV. Attractive packaging types and sizes are possible.

CRITERIA FOR COMBINED SOLUTIONS 1.3.1

Different workholding principles have different advantages and disadvantages. Different combinations can be used to find solutions even for difficult workholding problems, expand machining options and extend the range of workpieces that can be processed.

MAGNETIC CHARACTERISTICS

- Only for ferromagnetic workpieces
- The holding force is (physically) limited
- High normal force, low tangential force
- Two-dimensional force transmission
- Holding down of thin, uneven workpieces
- High damping
- Good accessibility, easy to clean, easy to automate
- Large range of workpieces
- Chucking without distortion

- Complete support for the workpiece
- (high damping, high precision) Machining from several sides in one chucking position
- Compact design
- Short changeover times
- Ergonomic and reliable, wear-free Cost-efficient compared to force-
- actuated workholding

HYDRAULIC/MECHANICAL CHARACTERISTICS

- Suitable for all workpieces
- High to very high force density
- Concentrated force transmission
- High force density
- Low-distortion chucking of blanks
- Also for non-magnetic workpieces
- Low damping

- Limited accessibility and cleaning
- Risk of workpiece deformation and damage
- Limited range of workpieces More complex systems, including with corresponding power supply

VACUUM SYSTEM CHARACTERISTICS

- Also for non-magnetic workpieces
- Two-dimensional force transmission
- Low force density, holding force physically limited
- Good damping
- Also for machining from several sides
- Easy to clean
- Reliable and wear-free

PNEUMATIC CHARACTERISTICS

- Concentrated force transmission
- Lower force density compared to hydraulics
- Low-distortion chucking of blanks
- Also for non-magnetic workpieces
- Low damping
- Limited accessibility and cleaning
- Limited range of workpieces

- Energy supply simpler compared to hydraulics
- More cost efficient compared to hydraulics

Large workholding elements

- More complex systems

1.3.2

MAGNETIC-PNEUMATIC FIXTURE

For laser welding

SIZE 1320 x 1100 mm

WORKPIECE Heat exchanger

APPLICATION Laser welding

DESCRIPTION

- Amplified electro magnet system
- With compressed air release
- Pneumatic clamps on the circumference
- On movable base structure

ELECTRO PERMANENT MAGNETIC WELDING FIXTURE For laser welding

SIZE 1500 x 1500 mm

WORKPIECE Passenger car tailgate

APPLICATION Laser cutting and welding of tailored blanks

DESCRIPTION

Pneumatically opening magnetic fixture, cutting of the welding edge and welding in one chucking process

ELECTRICAL CHARACTERISTICS

- Very flexible and comfortable control
- Can be largely automated

COMBINED SOLUTIONS

MULTIFUNCTION WORKHOLDING FIXTURE

Combination of all workholding principles

SIZE 2800 x 1030 mm

WORKPIECE Workpieces for packaging machines

APPLICATION

Milling

DESCRIPTION

- Combination magnetic hydraulic mechanical – vacuum technology
- Electro permanent high-energy magnets with pole raisers
- Hydro vices with large front areaGrid workholding system for
- modular fixture system • Vacuum workholding plate with grid
- Control with multifunction operating panel

HIGH-ENERGY MILLING MAGNET

With hydraulic workholding elements

SIZE 2400 x 530 mm

WORKPIECE Racks

APPLICATION Milling of the toothing

DESCRIPTION

- High-energy magnet system
- In combination with stops and hydraulic chucking elements

MAGNETIC-HYDRAULIC WORKHOLDING SYSTEM

Flexibility for heavy machining

SIZE

1000 x 1000 mm

WORKPIECE Precision plates

APPLICATION Surface milling and face milling

DESCRIPTION

- Magnetic/hydraulic combination
- High-energy magnetic chucks, heightadjustable, hydraulic clamping
- Additional hydraulic support elements and side tension
- Bar structure, longitudinal adjustment

SIZE 4260 x 753 mm

WORKPIECE Racks

APPLICATION 5-sided milling in 2 chucking processes

- · First chucking in two rows in conjunction with individually activated hydro chucks. Magnetic base chucking using rigid and movable pole shoes
- Second chucking with direct contact with magnetically active side stops

COMBINED FIXTURE

For magnetic – hydraulic – electromotor chucking of railway rails

;_____

Length 24 m

WORKPIECES

- Tongue rails and stock rails
- Centre pieces
- Block pieces

APPLICATION

Milling for railway rail manufacturing

DESCRIPTION

- Designed for extreme machining
- Combination of magnetic, hydraulic and electro-motor principles
- Touch screen operation, radio remote controlled
- Machine power 2 x 100 kW for workpiece positioning
- Exchangeable pole bars to create free space for tools

A) MILLING OF TONGUE RAILS AND STOCK RAILS TO 2 X 24 M LENGTH

- Amplified high-energy system Plug-in pole bars
 - - Head and foot machining and drilling

B) WELD PREPARATION ON THE CENTRE PIECES TO 2 X 5 M LENGTH

- Electric angle adjustment
- High-energy system for extreme machining (half rail profile)
- Hydraulic support elements as special version for contact with the foot

C) FINAL MACHINING OF THE CENTRE PIECES

- Hydro vices as special version with large projection
- Stocks with quick-change system

Pole blocks for contact with the head

Magnet system for chucking on the foot

MAGNETIC-HYDRAULIC FIXTURE

Flexible for large chucking areas/extreme machining

SIZE

System length 12 m

WORKPIECE Block ends

APPLICATION Extreme machining

DESCRIPTION

- Chucking and damping using high-energy magnets
- Centring and chucking of the thin sections with hydro chuck, centred and floating

₫

MAGNETIC-HYDRAULIC MILLING FIXTURE

For flexible railway point manufacturing

SIZE 8000 x 1200 mm

WORKPIECE Railway rails

APPLICATION Heavy milling

DESCRIPTION

Magnetic/hydraulic combination

- For different rail profiles on 2 levels and on 2 lines
- 3 m adjustable angle with electric motor

MAGNETIC-HYDRAULIC FIXTURE

For chucking rail profiles sensitive to bending

SIZE System length 8.5 m

WORKPIECE Tongue rails and stock rails

APPLICATION Extreme milling

DESCRIPTION

- Magnetic chucking on the foot downwards and to the side
- Optional chucking on the web at the side with exchangeable pole bar
- Solid hydraulic swivel chucks as special version for chucking on foot or web
- Machining in one cut with diameter 60 x 35 mm
- Machine power 2 x 75 kW

HIGH-ENERGY MILLING MAGNET With pole plate for thin parts

SIZE 1725 x 300 mm

WORKPIECE Doctor blades for printing machines

APPLICATION Milling of thin parts

DESCRIPTION

High-energy magnet with 33 mm transverse pole pitch

- Profiled chuck blocks with fine
- divisions for low field heights
- Lowering hydraulic stop

Exchangeable pole plate 4 mm transverse pole pitch For milling thin strips

220

C≯I 1.3 alline. Ч. 4 1 2.1 2.2 IJŊ. 3.1

с**Ļ** 3.2

With hydraulic stops

SIZE

2000 x 157 mm Total system 2 x 6 m on swivel bridge

WORKPIECE

Linear guideways

APPLICATION

Grinding of the guide tracks

DESCRIPTION

- 2 x 3 magnets on horizontal swivel bridge
- With hydraulic swivel chucks for workpiece positioning
- Exchangeable pole bars to create free space for tools

MAGNET VACUUM CLAMPING STRIP

For blade machining

SIZE

750 x 100 mm

WORKPIECE Tungsten carbide blades

APPLICATION Grinding

DESCRIPTION

- High-energy magnet system with longitudinal pole pitch
- Vacuum system in the pole gap

ELECTRO PERMANENT MAGNETIC CHUCK WITH ZERO-POINT SYSTEM

Exchangeable pole plates

SIZE 400 x 230 mm

WORKPIECE

Lamella-shaped slides for textile machines

APPLICATION Profile grinding

DESCRIPTION

- Magnet system with integrated zeropoint workholding system
- Workpiece held in profiled exchangeable pole plate
- Weight-optimised pallet can be loaded outside of the machine

MAGNETIC-PNEUMATIC-HYDRAULIC FIXTURE

Individual for our customers

SIZE Length 800 mm

WORKPIECE Thin blades

APPLICATION Grinding

- Damping with fine pole magnet
- Pneumatic actuation
- Hydraulic chucking and locking

MECHATRONIC CHUCK Fully electric workholding fixture

APPLICATION

- For automation
- Precise centring, reproducible with high accuracy
- High-performance machining and finishing
- Combination of first and second chucking
- Radial and/or axial chucking
- Chucking of eccentric parts

COMBINATION OF ROUND MAGNET AND **ELECTRIC LINEAR AXES**

- Servo drive with integrated brakes
- 300 daN holding force per actuator at D 1000 mm
- Direct measuring system with 0.001 mm resolution
- 50 mm chucking travel with quick-change jaws
- Electronic compensation of centrifugal force
- Amplified magnet system with optimised pole division
- Magnet material under each pole for minimum field heights
- 350 mm minimum magnetic range
- Smallest possible chuck diameter 800 mm
- at 100 daN holding force per jaw
- With 165 mm minimum height

VARIANT A • 3 axes centric • 3 axes applied inside or outside

 6 axes centric Applied inside or outside

VARIANT C Chucking of out-of-round parts

VARIANT D

- Manual workpiece alignment
- with dial gauge
- Magnetic pre-clamping
- 6 axes applied and clamped individually

VARIANT E

• 2 opposite axes each, centric

VARIANT F Chucking of eccentric and clampable parts for alternating alignment with the spindle

ELECTRO PERMANENT COMBINATION CHUCK

Mechanical and magnetic chucking

SIZE

1500 mm diameter

WORKPIECE Rings and plates

APPLICATION Turning

DESCRIPTION

- Amplified electro permanent magnetic system
- With 6 individually adjustable Wescott jaw systems
- Electrical connection integrated with slip ring assembly

COMBINATION CHUCK Mechanical centring, magnetic chucking

SIZE 1500 mm diameter

WORKPIECE Rolling bearing rings

APPLICATION Turning

- Amplified electro permanent magnetic system
- With integrated centring chuck and additional adjustable jaws
- Electrical connection with heavy-duty power connector

SPECIAL COMBINATION CHUCK

The magnet as a machine table

SIZE

1500 mm diameter

WORKPIECE

Mechanical seals

APPLICATION

Grinding

DESCRIPTION

- Electro permanent round magnet with hydro couplings as a table
- Hydraulic top-mounted fixture with large adjustment range
- Combination chucking axial and/or radial
- Sensitive axial support64-fold oil distributor

SIZE

350 mm diameter

WORKPIECE

Passenger car gearbox parts

APPLICATION

Cylindrical grinding

DESCRIPTION

- Sensitive centring in the centroid
- Chucking with electro permanent circular magnet
- Pole raisers to create free space for tools

ELECTRO PERMANENT COMBINATION CHUCK With centring device

SIZE

640 mm diameter

WORKPIECE

Rings for high-precision aerospace bearings

APPLICATION Hard turning

- 3-point centring device
- Height compensation using sensitive, movable pole shoes, individually chucked
- Model year 1998:
- first combination (hybrid) chuck on the market

1.3.3 **SPECIAL SOLUTIONS FOR MILLING**

For hard milling

SIZE 1400 x 1400 mm

WORKPIECE Dies for crankshafts

APPLICATION

Hard milling of the mould cavities

DESCRIPTION

- 4 magnet sides with 2 active magnets each
- Wear protection with pole bars
- Electrical connection with heavy-duty power connector for rotary table

HIGH-ENERGY MILLING MAGNET

For machining from 5 sides

SIZE 1900 x 750 mm

WORKPIECE Front plates for forklifts

APPLICATION Milling from 5 sides Including the openings

DESCRIPTION

- Powerful neodymium magnet system
- Pole bars to create free space for tools
- Folding stops with position monitoring

ELECTRO PERMANENT MAGNETIC PALLET

For milling sealing surfaces

SIZE 1000 x 1000 mm

WORKPIECE

Gearbox cover made of grey-cast iron

APPLICATION

Drilling and milling of sealing edges

DESCRIPTION

- First chucking with movable pole shoes and support elements
- Second chucking on rigid pole bars for generating exact parallelism

 $\textcircled{\bigcirc}$

 $\textcircled{\bigcirc}$

ELECTRO PERMANENT MAGNETIC SYSTEM

Efficient workholding fixture for large machines

SIZE

7000 x 1200 mm

WORKPIECE Steel plates

APPLICATION

Weld preparation with a variety of different contours

DESCRIPTION

- Amplified magnet system with demagnetising
- Rotary table integrated
- Through holes for zero point workholding system
- Pole rounds to create free space for tools

 S^{A}

C>I

ELECTRO PERMANENT MILLING MAGNET

With integrated rotary table

SIZE 5000 x 800 mm

WORKPIECE Plates with 20 mm thickness

APPLICATION Weld preparation and contour milling

DESCRIPTION

- High-energy magnet system 55 mm transverse pole pitch
- Integrated rotary table
- With integrated zero point workholding system

ELECTRO PERMANENT MAGNETIC CHUCK

With circular pole pitch

SIZE 1800 x 1470 mm

WORKPIECE

Variety of different contours From grates to thin plates

APPLICATION Milling from 5 sides

DESCRIPTION

The low magnetic field and the universal pole pitch allow machining of a variety of different workpiece contours

Flexibility also for difficult workpiece contours

SIZE 2000 x 1400 mm

WORKPIECE Machine side parts

APPLICATION Face milling and contour milling

DESCRIPTION

- Amplified magnet system with demagnetising cycle
 Chucking bracket with 2 chucking sides
- First chucking with movable pole shoes
- Second chucking with rigid pole bars

ELECTRO MAGNETIC SYSTEM For extreme material removal

SIZE 7800 x 1200 mm

WORKPIECE Slabs

APPLICATION Heavy milling with 2 heads simultaneously

DESCRIPTION

- Electromagnet system for extreme
- air gaps up to 15 mm
- Cutting depth ap = 7 mm
- Combination with hydr. stops

$\textcircled{\bigcirc}$

 $\textcircled{\bigcirc}$

 $\textcircled{\bigcirc}$

For small workpieces

SIZE 400 x 300 mm

WORKPIECE Notched impact samples

APPLICATION Milling of 4 sides

DESCRIPTION

- Amplified electro permanent magnetic system
- Magnetically active stops
- Exchangeable pole plate for chucking different cross-sections

ELECTRO PERMANENT CIRCULAR MAGNET

For heavy 5-axis machining

SIZE

 $\textcircled{\bigcirc}$

 $\textcircled{\bigcirc}$

600 mm diameter

WORKPIECE Plate materials

APPLICATION 5-axis machining

DESCRIPTION

- Amplified high-energy system55 mm transverse pole pitch
- Electrical connection with heavy-
- duty power connector

ELECTRO PERMANENT MAGNETIC PALLET For 5-axis machining

SIZE 680 mm diameter

WORKPIECE Plates with 15 mm thickness

APPLICATION 5-axis machining

DESCRIPTION

- High-energy system with 55 mm parallel pole pitch
- Electrical connection with connector
- Pole rounds to create free space for tools

ELECTRO PERMANENT MAGNET Pole bars to create free space for tools

SIZE 630 x 430 mm

WORKPIECE

Small plates with openings

APPLICATION

Milling of flat surfaces and openings

- High-energy magnet with narrow pole pitch for high forces and small contact surface
- Pole bars with stops to create free space for tools and for positioning

For very small parts

SIZE 400 x 355 mm

WORKPIECE Small cubes

APPLICATION Face milling on both sides

DESCRIPTION

- Neodymium magnet system with maximum magnetic workpiece contact surfaces
- Workpiece positioning and holding force increase with magnetically active stops

 $\textcircled{\bigcirc}$

 $\textcircled{\bigcirc}$

ELECTRO PERMANENT MAGNETIC CHUCK Amplified system

SIZE 300 x 150 mm

WORKPIECE Notched impact samples

APPLICATION Milling of the sample notch

DESCRIPTION

Strong electro permanent magnet with solid stops

HIGH-ENERGY MAGNETIC CHUCK

With active workpiece positioning in 3 directions

SIZE 630 x 430 mm

WORKPIECE

Tool base plates with openings

APPLICATION Milling of flat surfaces and openings

DESCRIPTION

- High-energy magnet with narrow pole pitch for high forces and small contact surface
- Workpiece positioning using 2 magnetically active stops in X and Y
- Flexibly movable pole bars and pole blocks to create free space for tools

ELECTRO PERMANENT MAGNETIC CHUCKS

With extreme field strength for large air gaps

SIZE 900 x 600 mm each

WORKPIECE Pole plates for presses

APPLICATION Heavy milling with extreme air gaps

DESCRIPTION

- Amplified magnet system with demagnetising cycle
- Heavy-duty stops can be folded down for 5-sided machining

Air gap diagram for full contact

With combined pole pitch

SIZE 2100 x 940 mm

WORKPIECE

Precision plates and bars

APPLICATION Face milling

DESCRIPTION

- Amplified high-energy systemModule pole pitch 140 x 105
- mm for large plates
- Parallel pole pitch 27.5 mm for thin bars

ELECTRO PERMANENT MAGNETIC INDEX TABLE

With extreme holding forces

SIZE 800 x 590 mm

 $\textcircled{\bigcirc}$

 \bigcirc

WORKPIECE Side plates for special-purpose vehicles

APPLICATION

Milling with high workpiece projection and drilling

DESCRIPTION

- High-energy system with 55 mm transverse pole pitch
- With exchangeable grates as add-on element for free tool running when drilling for thin bars

ELECTRO PERMANENT MAGNETIC PALLET

Completely automated

SIZE 500 x 300 mm

WORKPIECE

Leaf springs for vibration dampers

APPLICATION

Milling of the leaf profile in unmanned 3-shift operation

DESCRIPTION

- 4 magnets on cube pallet
- Low, concentrated magnetic field for thin parts
- Magnetically active stops for workpiece alignment

ELECTRO PERMANENT MAGNETIC BRIDGE

SIZE 3000 x 900 mm

WORKPIECE Machine part

APPLICATION Milling grooves

DESCRIPTION

 Swivel bridge with 4 electro permanent magnets

 As amplified system with longitudinal pole pitch

SAV DEVELOPMENT PROCESS

THE KEY TO JOINT SUCCESS: **RESEARCH AND DEVELOPMENT/CUSTOMER AND WORKPIECE** ORIENTATION

 $S^{(n)}$

New markets, fast innovation cycles, competitiveness and the pressure to deliver unique selling points make it necessary to develop customised solutions.

1. INQUIRY, TECHNICAL CLARIFICATION AND EVALUATION

- Machining operations
- Specification of the performance parameters
- Definition of the quality criteria
- Verification of the chucking points and areas
- Table adaptation and energy supply

2. FEASIBILITY STUDY/LAYOUT/QUOTATION

- Evaluation of different function principles
- Magnetic hydraulic mechanical vacuum or combinations

3. ENSURING FEASIBILITY, FUNCTION AND CALCULATION

- Tool and protrusion contour examinations
- FEM calculations, mechanical, magnetic, thermal, static and dynamic

4. MODELLING AND DESIGN ENGINEERING

- Design engineering on 25 networked CAD workstations, primarily in 3D
- Executed in Solid Works, Auto-CAD, Mechanical-Desktop and Euklid

5. DESIGN APPROVAL AND DETAILING

- Manufacturing approval after presentation to the customer
- Information exchange using IGES, DXF, DWG, STEP, VDA, PARASOLID, UNIGRAPHIC, VRML, STL

6. PRODUCTION

- Production and quality control exclusively at German sites
- Manufacturing linked with CAD/CAM workstations

7. TESTS, OPTIMISATION AND ACCEPTANCE

 Validated and optimised product quality before delivery for minimum machine downtime during commissioning and best production results

8. DELIVERY, INSTALLATION, COMMISSIONING AND INDUCTION

Responsibility for function and precision until the first sample

9. AFTER SALES SERVICE

Preventive maintenance, repair and spare parts service, minimum machine downtime during commissioning and best production results

238

ELECTRO PERMANENT MAGNETIC SYSTEM

For manufacturing railway points, web chucking/mono line

SIZE

System length 6 m

WORKPIECE Rails for manufacturing points

APPLICATION

Milling of running faces and feet

DESCRIPTION

- Amplified high-energy system
- Magnetically active alignment with 120 mm transverse pole pitch on the side of the web for extreme machining
- Basic chucking with longitudinal pole pitch

\bigcirc

 $\textcircled{\bigcirc}$

ELECTRO PERMANENT MAGNETIC SYSTEM For manufacturing railway points, web chucking/twin line

SIZE System length 4 m

WORKPIECE Rails for manufacturing points

APPLICATION Milling of running faces and feet

DESCRIPTION 2-row version

ELECTRO PERMANENT MAGNETIC SYSTEM

For manufacturing railway points, foot chucking/twin line

SIZE

10 m x 340 mm

WORKPIECE Railway rails

APPLICATION Heavy milling

DESCRIPTION

- High-energy system
- Active side stop on the foot to 2 sides
- 2-rows basic chucking

ELECTRO PERMANENT MAGNETIC SYSTEM For manufacturing tram profiles

SIZE Length 18 m

WORKPIECE Rails for manufacturing points

APPLICATION Heavy milling of running faces and feet on rail profile and Z-profiles

DESCRIPTION

Magnetic chucking on the foot

- Magnetic chucking alternatively on the web and on the side of the foot
- One row for regular and tongue profiles, second row for Z-profiles
- T-slot field for mechanical chucking

1.3.5 SPECIAL SOLUTIONS FOR PRECISION MILLING

ELECTRO MAGNETIC BAR

For alloys which are difficult to chuck

SIZE 450 x 70 mm

WORKPIECE Prisms

APPLICATION Grinding

DESCRIPTION Amplified electro magnet system for workpieces which are difficult to magnetise

ELECTRO PERMANENT MAGNETIC GRINDING FIXTURE For precise grinding of cubes on both sides

SIZE 630 x 220 mm

WORKPIECE Small cubes

APPLICATION Grinding on 4 sides on both sides

DESCRIPTION

- Loading on 2 sides
- Magnetically active stops, height-adjustable

SIZE 800 x 550 mm

WORKPIECE Gearbox parts

APPLICATION

Precision groove grinding

DESCRIPTION

- Amplified magnet system with demagnetising
- Hard inserts for mechanical wedge positioning system

ELECTRO PERMANENT MAGNETIC CHUCK With exchangeable pole plate

SIZE 600 x 400 mm

WORKPIECE Guide carriages

APPLICATION Grinding of faces and sides

DESCRIPTION

- Accommodation in the prism
- With stops and magnetically active alignment
- Exchangeable pole plate

ELECTRO PERMANENT MAGNETIC SYSTEM As large pallet

SIZE 3300 x 415 mm

WORKPIECE Bars

APPLICATION Milling chamfers

DESCRIPTION

- Precision magnet system with 18 mm transverse pole pitch
- Made from one piece for flexible use
- With prisms for workpiece holding

┫

SPECIAL SOLUTIONS FOR LINEAR GUIDEWAYS 1.3.6

For guide rails

SIZE 4000 x 150 mm

WORKPIECE Linear guideways

APPLICATION

Grinding of the guide tracks

DESCRIPTION

• 85 mm transverse pole pitch

Made from one piece

ELECTRO PERMANENT MAGNETIC PALLET

As pallet for linear guideways

SIZE 2310 x 260 mm

WORKPIECE Linear guideways

APPLICATION Grinding of the guide tracks

DESCRIPTION Electrical connection automatically docked

SIZE

4000 x 180 mm

WORKPIECE Linear guideways

APPLICATION

with 4 µm/4000 mm accuracy

DESCRIPTION

- With longitudinal pole pitch for homogeneous magnetic field along the entire length
- Made completely from one piece
- High-energy system
- Exchangeable pole plates to create free space for tools

SIZE

WORKPIECE

APPLICATION Grinding the sides

DESCRIPTION

SIZE 500 x 70 mm

WORKPIECE Linear guideways

APPLICATION

DESCRIPTION

- Manually operated, with rolling bearings

ELECTRO PERMANENT MAGNETIC PALLET

With exchangeable pole plates

SIZE 1200 x 320 mm

WORKPIECE Mini rails

APPLICATION

Precision grinding

DESCRIPTION

- Longitudinal pole pitch for maximum precision
- With exchangeable pole plates
- Version on zero-point workholding system

SIZE

1300 x 260 mm

WORKPIECE Guide carriages

APPLICATION

Grinding

- DESCRIPTION
- Longitudinal pole pitch with amplified magnet system
- Magnetically active stops, movable

HIGH-ENERGY ELECTRO PERMANENT MAGNETIC CHUCK For high holding force on difficult workpieces

SIZE 500 x 175 mm

WORKPIECE Guide carriages

APPLICATION Grinding the bolt-on surface

DESCRIPTION

- Force-optimised system
- Magnetically active stop bar
- For small workpiece contact surfaces
- Exchangeable precision stop

1.3.7

ELECTRO PERMANENT MAGNETIC INDEX TABLE For grinding with large workpiece projection

SIZE

1730 x 230 mm

WORKPIECE Bottom bending tools

APPLICATION Grinding

DESCRIPTION

Reinforced magnet system for on-the-fly grinding of bottom bending tools

| ELECTRO PERMANENT MAGNETIC BI |
|-------------------------------|
| With index table |

SIZE 1100 x 200 mm

WORKPIECE Broaching tools

APPLICATION Grinding

- 4 workpieces on swivel bridge
- With magnetically active stops
- With precision index table

Precision – individually

248

manufactured

SPECIAL SOLUTIONS FOR PRECISION SINE TABLES 1.3.8

PRECISION MEASURING TABLE

For angle adjustment in 3 axes

SIZE 600 x 150 mm

WORKPIECE Turbine blades

APPLICATION

Measuring

DESCRIPTION

- 3 swivel axes with adjustment gear
- High axis with degree scale and vernier
- Transverse axis using the sinusoidal principle

PRECISION SINE TABLE With solid hydraulic attachment and clamping

SIZE 1000 x 500 mm

WORKPIECE Forming

APPLICATION

Roughing on segment grinding machine

DESCRIPTION

- Sine table with electro permanent magnetic chuck
- With hydraulic swivel drive
- With rotary encoder and display unit
- All axes can be hydraulically clamped

PRECISION SINE TABLE With special sealing

SIZE 1200 x 200 mm

WORKPIECE Plates

APPLICATION Grinding

DESCRIPTION

- Swivelling around the short axis up to 15°
- Adjustment mechanism and bearing sealed
- With solid clamping
- Inherently rigid design, bending-optimised
- All axes can be hydraulically clamped

HIGH-PRECISION SINE TABLE

Hydraulic clamping

SIZE 1000 x 600 mm

WORKPIECE Thin plates

APPLICATION Grinding

DESCRIPTION

- Swivelling around the short axis
- With mechanical adjustment gear
- Distortion-free hydraulic clamping
- Flatness and parallelism 0.01 mm
- Integrated length measurement system with 1 µm resolution

SIZE 655 x 150 mm

WORKPIECE Turbine blades

APPLICATION

Grinding

DESCRIPTION

- Swivelling around the central axis to both sides
- Adjustment with worm gear
- Angle set with degree scale and vernier or alternatively using the sinusoidal principle

PRECISION VACUUM SINE TABLE For chucking glass

SIZE 800 mm diameter

WORKPIECE

Glass prisms for military applications

APPLICATION Grinding

DESCRIPTION

- Adjustment on both sides ±20°
- Suction plate made of Ferrozell
- Reinforced with support elements

PRECISION SINE TABLE

With milling magnet

SIZE 300 x 150 mm

WORKPIECE Hard boards

APPLICATION Precision grinding

DESCRIPTION

- Swivelling around the central axis to both sides
- Angle adjustment using gauge blocks
- Clamping with threaded rods

PRECISION SINE TABLE

Swivelling to both sides

SIZE

1000 x 150 mm

WORKPIECE Blades

APPLICATION Grinding

DESCRIPTION

- Swivelling around the central axis ± 20°
- Distortion-free clamping using Spieth sleeves on both sides

PRECISION SINE MEASURING TABLE

Stainless version

SIZE 650 x 300 mm

APPLICATION

For measuring tasks

DESCRIPTION

- Solid design, precision-optimised
- With adjustment gear
- Flatness and parallelism 3 µm/100 mm

PRECISION SINE TABLE Special version

SIZE Length 1200 mm

WORKPIECE Blades

APPLICATION Grinding

- Adjustment gear can be latched at the front
- Precision version with 4-fold support
- and 2 gauge block supports

PRECISION SWIVEL DEVICE

High accuracy for extremely long parts

SIZE Length 12 m

WORKPIECE Swap body trailers

APPLICATION Milling and grinding on combined machine

DESCRIPTION

- Swivel device with electro permanent magnet and pole blocks, motor driven, with rotary encoder
- Direct measuring system
- Axes with hydrostatic bearing
- With hydraulic clamping

ELECTRO PERMANENT MAGNETIC INDEXING TABLE

For milling small parts

SIZE 500 x 220 mm

WORKPIECE

Notched impact samples

APPLICATION Milling the notches and side faces

DESCRIPTION

- Amplified electro permanent magnetic system
- Creating free space for tools for manufacturing 3 workpiece rows from one plate
- Swivelling and indexing -90°/0°/+90°

1.3.9

SIZE

 \bigcirc

700 mm diameter

WORKPIECE Rings

APPLICATION

DESCRIPTION

- T-slots for pole shoes to create free space for tools

SIZE

325 mm diameter

WORKPIECE

APPLICATION

Grinding

DESCRIPTION

SIZE 300 mm diameter

WORKPIECE Parts for Geneva drives

APPLICATION

- Coordinate grinding of drilled
- holes and contours
- Stationary chucking

- workpieces, precise changing

For centreless shoe grinding

SIZE

Diameter 180 to 500 mm

WORKPIECE Rolling bearings with small contact surfaces

APPLICATION

For high-precision sliding shoe grinding

DESCRIPTION

- Workpieces held axially using drivers for initiating the rotating motion
- High-precision workpiece positioning eccentric using stationary sliding shoes

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

For manufacturing large bearings

SIZE

3100 mm diameter

WORKPIECE Rings

APPLICATION Grinding

DESCRIPTION

- Amplified magnet system with demagnetising cycle for low residual remanence
- Pole raisers to create free space for tools

ELECTRO MAGNETIC CIRCULAR CHUCK

For sliding shoe grinding of large rings

SIZE 650 mm diameter

WORKPIECE Bearing rings

APPLICATION Sliding shoe grinding

DESCRIPTION

- Electric magnet with radial pole pitch
- T-slots for pole raisers to create free space for tools

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK With narrow, direct pole pitch

SIZE 1200 mm diameter

WORKPIECE Wide rings and discs

APPLICATION Grinding on rotary table machines

- Amplified magnet system
- 28 mm parallel pole pitch
- Housing annealed without stress

ELECTRO MAGNETIC CIRCULAR CHUCK WITH SEGMENT SWITCHING

For automatic grinding of very small parts

SIZE

740 mm diameter

WORKPIECE Ferrite cores

APPLICATION

Automated parallel grinding

DESCRIPTION

- Magnet with homogeneous field for small workpieces
- Rotating magnet, 16 upright magnet segments for automated loading and unloading as well as processing on segment grinding machines
- Cooling water draining at the centre

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

For planetary gears

SIZE

1600 mm diameter

WORKPIECE Gearwheels

APPLICATION

Cylindrical grinding

DESIGN

- Amplified system with demagnetising
- T-slots for optional pole shoes

DRIVEN LAMINATED TOP PLATE - SPECIAL EXECUTION

For automatic segment switching

SIZE 830 mm diameter

WORKPIECE

Rolling bearing

APPLICATION

Parallel grinding on segment grinding machine

DESCRIPTION

- Pole plate driven through ring gear
- Upright magnet system for automatic grinding
- 24 individually activated segments

All-around precision with high performance

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

Magnets for machining large parts

SIZE 4300 mm diameter

WORKPIECE Bearing rings

APPLICATION Machining from 3 sides

DESCRIPTION

- Minimal chucking and set-up times
- Extreme forces also for heavy machining
- Complete table surface usable
- High accuracy and damping from two-dimensional force transmission
- Large magnetically active areas in circumference direction
- Very small non-magnetic zones at the centre
- Individual spindle adaptation
- High circumferential speeds
- Extremely large diameters, e.g. 12 m in segment version

┫

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

For precision turning

SIZE 400 mm diameter

WORKPIECE Grinding wheel blanks

APPLICATION Turning finishing

DESCRIPTION

- Exchangeable pole rings to create free space for tools
- Precision version for manufacturing in the range of a few µm
- Exchangeable precision centring pin at the centre

ELECTRO PERMANENT CIRCULAR MAGNET

With zero point system

SIZE 500 mm diameter

WORKPIECE Bearing rings

APPLICATION Hard turning

DESCRIPTION

- Amplified system with demagnetising
- Centric zero point system
- For centring templates for workpiece alignment

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCKS For automatic pallet changes

 \bigtriangleup

 $\widehat{}$

SIZE

Diameter 800 and 900 mm

WORKPIECE

Ring gears

APPLICATION Hard turning

DESCRIPTION

- Electro permanent magnetic pallets
- With heavy-duty power connector on the circumference

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

With special spindle integration

SIZE

200 mm diameter

WORKPIECE Rings

APPLICATION

 Hard turning on magnet Turning on jaw chuck

DESCRIPTION

- Magnet using spring-loaded contact pieces, exchangeable
- Spindle integration in the draw tube with hollow
- clamping cylinder for optional jaw chuckElectrical supply, hydraulics and internal cooling water supply for alternating use

¢I 1.3

Ч. 4

Spring-loaded contact pieces with cooling water supply

Contact flange

Electro permanent circular magnet with radial pole pitch, exchangeable

POLE RAISERS AND POLE BEAMS

To create free space for tools

POLE RAISERS

- To create free space for tools for machining from 3 sides
- Rigid version or spring-loaded live version
- Radially adjustable using T-slots
- Workpiece-specific design

POLE BARS

- As wear protection
- With and without T-slots
- Easy to clean

LAMINATED TOP PLATES AND RINGS

For adapting to your workpiece

ADD-ON POLE PLATES

- No loss of workpiece contact surface
- Easy to exchange
- Good swarf discharge and cleaning

ADD-ON POLE RINGS

- Up to 650 mm diameter
- Easy to exchange
- Cost-efficient

ADD-ON POLE PLATES

- For creating free space for tools
- For machining from 3 sides

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK Large magnets

SIZE 3600 mm diameter

WORKPIECE Bearing rings

APPLICATION

Hard turning of rolling bearing rings

DESCRIPTION

- Solid monoblock design
- Wear-free solid-state design
- Machining from solid material
- High magnetic fill level and efficiency
- Long-term stability thanks to stress-free annealed housing

SIZE 3500 mm diameter

WORKPIECE Bearing rings

APPLICATION For soft turning with high level of material removal

DESCRIPTION

Extremely low height, with pole bars and rigid pole shoes

Tools

 \bigtriangleup

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

EP CIRCULAR MAGNET SIZE ø 200 mm

 Accuracy and stiffness from pole plate • High quality on parallelism and flatness upon agreement

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

For heavy turning

SIZE 3600 mm diameter

Hollow wheels for wind turbine gears

APPLICATION

WORKPIECE

Turning and drilling

DESCRIPTION

- First and second chucking with rigid and movable pole raisers
- Design for heavy machining and extreme speeds
- Workpiece positioning with centring crossbeam

ELECTRO PERMANENT MAGNETIC CIRCULAR CHUCK

Magnets for wind turbine bearings

SIZE 2800 m diameter

WORKPIECE Bearing rings

APPLICATION Machining from 3 sides

DESCRIPTION

- Made from one piece
- Minimal chucking and set-up times
- Extreme forces also for heavy machining
- Complete table surface usable
- High accuracy and damping from two-dimensional force transmission
- Large magnetically active areas in circumference direction
- Very small non-magnetic zones at the centre
- Individual spindle adaptation
- High circumferential speeds
- Extremely large diameters, e.g. 12 m in segment version

 \triangle

 \triangle

WORKPIECE Bearing rings

APPLICATION For hard turning

MANUFACTURING BENEFITS OF MAGNETIC CHUCKING

- Precision machining from 3 sides in one chucking process
- Levelling of the reference surface
- Two-dimensional holding force with high
- damping for excellent surface qualities Cost-efficient workholding fixture with low effort for machine integration
- Flexibility thanks to large workpiece holding area
- Releasing of internal workpiece holding during production

TEST RESULTS FOR HARD TURNING RING Ø 600 MM

| Shape or surface quality | Reproduced quality of magnetic chuck | Improvement potential* |
|-----------------------------|--------------------------------------|------------------------|
| Arithmet. average roughness | 0.3 µm | 0 % to 25 % |
| Circle format deviation | 0.5 µm | 75 % to 90 % |
| Cylinder irregularity | 10 µm | 80 % to 85 % |
| Wall thickness fluctuation | 25 µm | 60 % to 80 % |

* Improvement potential compared to conventional methods

SYSTEMS

DRESSING AND

WORKHOLDING

FOR GRINDING

Are you looking for a tailor-made option for upgrading your surface grinding machine? With the SAV accessory units for dressing grinding wheels and cylindrical grinding, we offer a simple and reliable option for expanding functions. The supplementary SAV dressing and workholding systems are ideal, for example, if you only have to grind profiles,

angles or radii occasionally but still require high-precision results. Our range of add-on units with proven, reliable precision offers exactly the right performance. But our precision cylindrical grinding units are also the ideal functional modules for your application if you want to use your surface grinding machine as aprecision cylindrical grinding unit for specific projects. Even if maximum precision is required, e.g. when grinding tapers, you can make use of our dressing and workholding systems with sine adjustment. Please contact us with your requirements so we can provide you with more information.

GOUR DRESSING AND WORKHOLDING SYSTEMS HELP YOU TO CREATE EFFECTIVE **HIGH-PRECISION GRINDING RESULTS.**

TRUST IN THE EXPERTS WITH SAV!

SAV 434.01

PRECISION RADIUS DRESSER

For profiling grinding wheels

APPLICATION

The radius dressing unit can be used to profile dressing wheels up to 400 mm diameter with concave or convex radii.

DESIGN

The lapped, robust spindle runs in a honed hole and is sealed against dust. With degree scale. The radius movement is limited by adjustable stops. The arm with the dressing diamond is height-adjustable using threads. A fine-adjustment screw on the arm can be used to move the diamond into the correct position.

The precision radius dresser is delivered with 3 exchangeable dressing inserts and dressing arm 2 as a standard. 2 additional arms with a larger range for the dressing radius are available. Arm 3 with a 100 mm raising foot for dressing larger radii.

ACCESSORIES

Dressing diamond SAV 401.01 - K 10, type D Arm 1 - SAV 434.01 - 1 Arm 3 - SAV 434.01 - 3 - includes support block LxWxH 128x128x100 All subject to a surcharge.

SAV 434.02

PRECISION RADIUS DRESSER

For profiling grinding wheels

APPLICATION

The radius dressing unit can be used to profile grinding wheels with concave and convex radii in combination with tangent bevels.

DESIGN

Finished on all sides, with limit stops and a magnifying sight glass in the spindle. The swivel arm features a scale. The radius movement is limited by adjustable stops. The slider with the dressing diamond is attached to the swivel arm with a dovetail structure. The dressing diamond is set with gauge blocks. A fine-adjustment screw on the diamond holder can be used to move the diamond into the correct position.

ACCESSORIES

Dressing diamond SAV 401.01 - K 06 Available subject to a surcharge.

PRECISION ANGLE DRESSERS

For angled dressing of grinding wheels

APPLICATION

For precise grinding wheel dressing using the sinusoidal principle on surface grinding machines.

DESIGN

All parts hardened HRC 60 and precision-ground. The starting position of the dressing unit is at 45°. Angle accuracy: 5 arc sec

ACCESSORIES

Dressing diamonds for SAV 434.05 - 45: SAV 401.01 - K 10 Dressing diamond for SAV 434.05 - 100: SAV 401.01 - MK 1 Available subject to a surcharge.

APPLICATION

The desired angle is adjusted with gauge blocks as per a supplied table (sinusoidal principle).

| Max. dressing travel A | in mm | 45 | 100 |
|------------------------|-------|------------|-----------|
| Base area B x C | in mm | 140 x 70 | 245 x 78 |

SAV 434.07

PRECISION PUNCH GRINDER

For grinding dies and profiling grinding wheels

APPLICATION

For grinding dies with maximum precision and for profiling grinding wheels.

DESIGN

Manufactured completely from steel with maximum precision. All parts hardened and polished. Radius dressing arm for grinding wheels up to 200 mm diameter is delivered as a standard.

HANDLING

Adjustable stops and a stop pin allow any desired angle to be set. The stops are clamped to a conical strip to achieve the best possible workholding force. Adjusting screw for uncomplicated adjustment of the prism support. Device for setting any desired angle with the adjustable stop, the stop pin and the gauge blocks using the sinusoidal principle. The prism support is guided in a T-slot in the middle of the indexing plate. A single screw clamps the prism support in any position without deviation. Indexing pin and index plate with 24 notches, 15° division and an accuracy of ±30 arc sec Hand crank for easy turning of the index plate. 30 mm through hole for long dies. The L-shaped design of the

base unit gives the device additional strength and rigidity.

ACCESSORIES

Angled dressing tool: SAV 434.07 - 01 Dressing diamond: SAV 401.01 - 10 - 92 Both subject to a surcharge.

PRECISION CYLINDRICAL GRINDING UNIT

Complete with tailstock, adjustable using the sinusoidal principle

APPLICATION

The cylindrical grinding unit was developed specially for use in toolmaking, die making and mould making. Due to its convenient size, the device can be used any time without setup work.

Its universal suitability makes it possible to machine parts which cannot be manufactured on cylindrical grinding machines or only with great effort.

DESIGN

The base plate and all wear parts are hardened. Protection rating of bearing and motor: IP 54. With spindle versions:

- Schaublin 470 E (Sch): Feedthrough 23.5 mm
- SK 30 (SK 30)
- Deckel 355 E (D): Feedthrough 20.0 mm

Tailstock adjustable on base plate, with spring-loaded lathe centre. Control unit SAV 875.40 included in the delivery. 24 V electric motor, continuously adjustable from 0 - 333 rpm. Clockwise/anti-clockwise rotation.

With dividing unit 12 x 30° using indexing bolt, other divisions on request. Sine swivel range from $0 - 45^{\circ}$.

ACCESSORIES

- Permanent magnetic circular chuck:
- D = 100 mm, with flange. SAV 244.03 100 taper Three-jaw chuck:

- D = 0.5 to 19.0 mm
- or complete set from 3.0 to 18.0 mm (set) SAV 439.66 355 E set

APPLICATION

Cylindrical grinding, taper grinding, profile grinding, plunge grinding. The cylindrical grinding unit was developed specially for use in toolmaking, die making and mould making. Swivelling using the sine principle can be used to additionally set this unit to a vertical position. This then makes it possible to carry out surface grinding work.

DESIGN

The base plate and all wear parts are hardened. The bearing and the motor are splash water protected, IP 54. Swivelling up to 90°. Special version on request.

With spindle versions:

- Schaublin 470 E (Sch)
- Steep taper 40 (SK 40)

Compact, small space requirement. Instantly ready for use.

Control unit SAV 875.40 included in the delivery. 24 V electric motor, continuously adjustable from 0 - 200 rpm. Clockwise/anti-clockwise rotation.

With grid holes $4 \times 90^\circ$. With grid indexing for use as index table available on request (surcharge applies). Max. direct division 24 x 15°. Sine swivel range from $0 - 90^{\circ}$. Modular system. Special taper and versions possible on request. Suitable for concentricity testing.

CHAPTER 3 VICES AND FIXTURES

Im Text und bei Harald Leibold steht noch "Stationary Workholding"!!! Soll das auch geändert werden?

FOR OUR CUSTOMERS FROM ALMOST ALL AREAS OF INDUSTRY, WE ARE MORE THAN JUST A SUPPLIER OF WORKHOLD-ING SYSTEMS –

Customer requirements are our benchmark: better, safer, more efficient. Our aim is to develop optimum workholding systems using state-of-the-art engineering development and manufacturing methods.

Our range includes standard workholding elements such as precision pull-down clamps, sine tables for grinding and EDM applications.

Other products from the portfolio of our partners:

- Hydraulic workholding for subtractive manufacturing
- Workpiece workholding systems, machine vices
- Vacuum workholding systems in standard and custom versions

Our development department, which specialises in the mechanical and hydraulic design of stationary workholding and fixtures, develops the best possible solutions in each case together with the customer and implements these with expert knowledge, experience, precision craftsmanship and quality awareness.

The full skill set of a supplier is revealed in the multi-faceted discipline of stationary workholding: Virtually nothing is a standard – almost everything has to be made possible. This requires more than just theoretical design engineering knowledge: It requires a feeling for different materials and their properties, an understanding of the complexity of processes and creativity for finding the most reliable solution.

WE ARE A PARTNER, A TRUSTED ALLY AND AN ENTHUSIASTIC CO-DEVELOPER.

CUSTOM GRINDING FIXTURES

DESIGN

- Made of tool steel
- Fully hardened HRC 58-60
- Perpendicularity 0.005/100 mm
- Parallelism: 0.005/100 mm
- Horizontally and vertically ground-in prism in movable jaws

We develop and manufacture custom grinding fixtures. Please contact us for a consultation.

PRECISION MACHINE VICES For precision workholding, stainless version

APPLICATION

OPTIONAL

Wire-cut and die-sinking EDM,

grinding, drilling, measuring

- Stainless tool steel, hardened
- Fully hardened HRC 45-55
- Perpendicularity 0.003/100 mm
- Parallelism: 0.003/100 mm
- Horizontally and vertically ground-in prism Wooden storage box (surcharge applies) in movable jaws

SAV 235.71

PRECISION SINE TABLES Swivelling around the longitudinal axis

DESIGN

Swivelling around the longitudinal axis. Sine table base unit made of steel. Hardened, burnished and precision-ground. Swivel plate designed with tapped holes M8 (G). From size 400 x 200 mm available with T-grooves (T) (subject to a surcharge). Mechanical adjustment gear alternatively available (subject to a surcharge.) This increases the height by approx. 40 mm at 0° swivel angle. Delivered in a wooden storage box, up to and including size 450 x 150 mm. With sine table with degrees/minutes in mm.

TECHNICAL DATA

- Angle accuracy: ±5 arc sec
- Plane parallelism: ±0.005/100 mm
- Gauge block at 0°: 3 mm
- Swivelling range: 0° to 45°

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle. Depending on the workpiece, either precision toolmakers vices or controllable permanent magnets can be placed on the swivel plate. Clamping with lateral fastening brace and on the upper bearing shells.

SAV 235.72

PRECISION SINE TABLES

Swivelling around longitudinal and transverse axis

DESIGN

Swivelling around longitudinal and transverse axis. Sine table base unit made of steel. Hardened, burnished and precision-ground. Swivel plate designed with tapped holes M8 (G). From size 400 x 200 mm available with T-grooves (T) (subject to a surcharge). Mechanical adjustment gear alternatively available (subject to a surcharge.) This increases the height by approx. 40 mm at 0° swivel angle for each axis.

Delivered in a wooden storage box, up to and including size 400 x 200 mm. With sine table with degrees/minutes in mm.

TECHNICAL DATA

- Angle accuracy: ±5 s
- Plane parallelism: ±0.005/100 mm
- Gauge block at 0°: 3 mm
- Swivelling range, long axis: 0° to 45°
- Swivelling range, short axis: 0° to 30°

APPLICATION

The angles are determined using the gauge blocks using the sinusoidal principle. Suitable for workpieces with two work levels. Clamping is achieved with a fastening brace at the side and the upper bearing shells.

VACUUM WORKHOLDING FIXTURE For cast magnesium parts

SIZE Length 1600 mm

WORKPIECE Automotive parts

APPLICATION Milling, drilling

DESCRIPTION Pneumatic centring and positioning, includes pneumatic control

HYDRAULIC DUAL WORKHOLDING FIXTURE

SIZE 800 x 400 x 400 mm

WORKPIECE Automotive parts

ŕ

Ļ

APPLICATION Milling, drilling, thread cutting

DESCRIPTION

- Swivel/tilt fixture
- 4/5-axis machining with NC index table and clamping counterbearing
- Pneumatic/hydraulic rotary feedthroughs
- Limit position scanning of the tilting positions

4.1

VACUUM WORKHOLDING FIXTURE For aluminium plates

SIZE 1100 x 750 mm

WORKPIECE

Automotive parts

APPLICATION Milling, drilling

DESCRIPTION

- Hydraulic pre-clamping
- Main workholding with vacuum

LEVER WORKHOLDING FIXTURE With mandrel

SIZE

450 x 450 x 480 mm

WORKPIECE

Flange

APPLICATION Milling, drilling

- Workholding fixture with special lever clamping, hydraulic
- Integrated special sliding jaws mandrel

HYDRAULIC 4-FOLD WORKHOLDING FIXTURE

On dual index table

SIZE 800 x 550 x 420 mm

WORKPIECE Aluminium housing

APPLICATION

Milling, drilling, spindles

DESCRIPTION

- 2-axle indexing unit with 4 NC axes
- 3 special swivel clamps each
- Workpiece placement monitoring using air sensoring
- Base structure made of high-strength aluminium, hard-coated

HYDRAULIC 4-FOLD WORKHOLDING FIXTURE

SIZE 620 x 400 x 350 mm

Ê

Ê

WORKPIECE Forged steel parts, automotive parts

APPLICATION Milling, drilling

DESCRIPTION Placement and clamping monitoring integrated for automatic loading

DUAL WORKHOLDING FIXTURE

SIZE 2400 x 1150 x 720 mm

WORKPIECE

Automotive magnesium chassis parts

APPLICATION

Milling, drilling, spindles

DESCRIPTION

- NC index table (NC axis 360°)
- Counterbearing with hydraulic clamping and multiple rotary feedthrough for hydraulics and pneumatics
- Workpiece placement monitoring using air sensoring Basic fixture designed as a welded structure with
- square tube profiles

6-FOLD WORKHOLDING FIXTURE

SIZE

950 x 450 x 450 mm

WORKPIECE Cast aluminium parts

APPLICATION Milling, drilling, spindles

- Workpieces pressed down with swivel-clamping pendulum claws
- Dynamic pressure scan of the open position of the contact cylinder
- Lateral "floating" clamping of the workpieces, self-locking workholding

HYDRAULIC WORKHOLDING FIXTURE

SIZE 2000 x 400 x 400 mm

WORKPIECE Racks

APPLICATION Assembly

DESCRIPTION Used for assembling rack elements in linear guideways

4-FOLD WORKHOLDING FIXTURE

SIZE 630 x 450 x 350 mm

Ê

Ê

WORKPIECE Cast aluminium parts, workholding position 1

APPLICATION Milling, drilling, spindles

DESCRIPTION

workpieces

- Workholding with special swivel clamps, hydraulic
- X/Y aligned workholding units for doublespindle machining centre
- Exchangeable parts for different Hydraulic support elements

DUAL WORKHOLDING FIXTURE

SIZE 396 mm diameter

WORKPIECE

Cast aluminium parts

APPLICATION Milling, drilling, spindles

DESCRIPTION

- Workholding with swivel clamps, hydraulic
- Spring-loaded conical bolts for positioning
- Workpiece scanning using air sensor bolts
- Hydraulic support elements
- Chuck body made of high-strength aluminium, hard-coated

4-FOLD WORKHOLDING FIXTURE

SIZE

630 x 450 x 350 mm

WORKPIECE

Cast aluminium parts, workholding position 2

APPLICATION Milling, drilling, spindles

- Workholding with special swivel clamps, hydraulic
 X/Y aligned workholding units for double-spindle
- machining centre
- Exchangeable parts for different workpieces
- Hydraulic support elements

CHAPTER 4 FIXTURE CONSTRUCTION FOR CIRCULAR CHUCKS

Whether round or cubic workpieces, whether conventional or cycle-controlled machines: Our rotary workholding products ensure minimum setup times, maximum efficiency and flexibility.

We offer a broad range of jaw chucks and accessories, clamping chucks, mandrels and vacuum workholding systems as standard and special versions.

Regardless of the task at hand - our work is always

- absolutely economically viable and focused on practical value
- workpiece and process oriented
- highly precise
- fast and flexible thanks to in-house development and production

This ensure SAV workholding solutions for turning, grinding and milling

- Low wear and maintenance
- Intelligent combinations and automation options
- Adaptable to any spindle, specifically for your machine
- Well thought-out as an intelligent complete solution

FROM STANDARD TO COMPLEX INTEGRATION INTO EXISTING APPLICATIONS: WE CAN FIND THE IDEAL SOLUTION FOR ANY REQUIREMENT.

TRUST IN THE EXPERTS WITH SAV!

FINGER CHUCK

 Precision workholding with point contact/clamping, no flattening of uneven parts

R

SPECIAL CLAMPING CHUCK For pipeline elements

SIZE Diameter: 1140 mm

WORKPIECE Pipes for the petroleum industry

APPLICATION

Pipe end machining (squaring, chamfering and thread cutting)

DESCRIPTION

- Front and rear chuck for special turning machines for pipe end machining
- Hydraulic 12-point clamping chuck, with changeover from centred to compensating action
- Front chuck additionally with integrated pre-centring function on one plane in front of the clamping jaws
- Centring jaws move fully back behind the level surface of the chuck body after centring

TECHNICAL DATA

- Clamping range: 6 1/2" 16"
 Clamping force: 40000 daN
- Max. speed: 500 rpm

Force and accuracy – tailored to workpiece and process

~ 1600 kg

COMPENSATION CHUCK

BOLT CHUCKS

Extreme machining

Shaft workholding with centre offset

6-JAW COMPENSATION LEVER СНИСК Low-deformation chucking

of rings

3-FINGER CLAMPING CHUCK With bolt

CENTRING AND FACE CHUCK Radial displacement

SIZE Diameter: 630 mm

WORKPIECE Sheet metal housings

APPLICATION Turning (inner and outer contours), drilling

DESCRIPTION

Modular kit for flexible workholding of part families

3-FINGER CLAMPING CHUCK With centring system

SIZE Diameter: 315 mm

WORKPIECE

SIZE

Diameter: 315 mm

WORKPIECE

APPLICATION

DESCRIPTION

3-finger clamping chuck (angled finger) Axial tension disc of the chuck is

aluminium, hard-coated and non-magnetic

engaged using an electro magnetChuck released with compression springsChuck body made of high-strength

Slip rings

Grinding

Flat lock washers

APPLICATION Axial and radial cylindrical grinding

DESCRIPTION

- 3-finger clamping chuck (axial finger)
- 3 synchronised, clamping profile pins for positioning in the tooth gap
- Fast conversion to 2 workpieces
- Workpiece with hardening distortion: offsets are aligned

COMPENSATION CHUCK WITH SPRING-LOADED CENTRING PINS Hydraulic ball stud

SIZE

Diameter: 200 mm

WORKPIECE

Aluminium discs

APPLICATION

Face and external turning

DESCRIPTION

- Low-deformation chucking with hydraulic compensation
- Accommodation in positioning pins

HYDRAULIC 3-JAW CHUCK Compensating

SIZE

Diameter: 315 mm Clamping range: 150 – 225 mm Clamping force: 14000 daN

WORKPIECE Pipes for the petroleum industry

APPLICATION

Centring of tubes before (compensating) chucking on special turning machines for tube end machining

DESCRIPTION

 Hydraulic 3-jaw lever chuck, external and internal clamping

3-JAW LEVER CHUCK With axial clamping

SIZE

Diameter: 420 mm Height: 180 mm

WORKPIECE

Cast aluminium covers

APPLICATION Turning

DESCRIPTION

- 2 conical spring-loaded tapers
- 3 clamping levers with axial clamping
- Integrated rinsing nozzles through the spindle of the turning centre

REAR CHUCK Centred and compensating

SIZE

Diameter: 630 mm Clamping range: 2 3/8" - 7" Clamping force: 18000 daN Max. speed: 1000 rpm

WORKPIECE Pipes for the petroleum industry

APPLICATION Pipe end machining (squaring, chamfering and thread cutting)

DESCRIPTION

• Hydraulic clamping chuck, with changeover, centred and compensating action

2+2 JAW CHUCK for automotive parts

SIZE

Diameter: 400 mm

WORKPIECE

Differential housing

APPLICATION Turning the spherical shape

DESCRIPTION

 2+2 jaw chuck with axial pressure element and radial alignment unit

358

SPECIAL CLAMPING CHUCK Console taper

CENTRING WORKHOLDING FIXTURE With vacuum

SIZE Diameter: 250 mm

WORKPIECE Automotive parts

APPLICATION

Turning

DESCRIPTION

• Hydraulic clamping on lateral flange face

SIZE 700 x 700 x 420 mm

WORKPIECE Carbon fibre brake discs

APPLICATION Milling, drilling, spindles

DESCRIPTION

- 3-jaw centring from inside and outside
 1 pneumatic alignment unit (indexer)
- Workpiece support rings with vacuum pockets
- Extraction channels with carbon fibre dust

SPECIAL WORKHOLDING FIXTURE IN SPECIAL DESIGN For face side machining

SIZE Diameter: 280 mm Height: 500 mm

WORKPIECE

Shafts, injector bodies

APPLICATION Grinding the flat surface

DESCRIPTION

- Workholding device for clamping rotation-symmetrical workpieces
- Fixture flap for easier inserting of the workpiece

CENTRING WORKHOLDING FIXTURE With axial clamping

SIZE

600 x 600 x 410 mm

WORKPIECE

Cast rings

APPLICATION Milling with slotting cutter set

- 4-jaw centring from inside
- 4-axial swivel clamps with pendulum claws
- Quick-change jaws
- Quick-change workpiece support

GENERAL TERMS AND CONDITIONS

Last updated: June 2018

GENERAL INFORMATION, SCOPE 1.

- 1.1. The legal relationships between the seller (SAV GmbH) and the customer ("buyer" in the following) are based on these General Terms and Conditions ("T&C" in the following). The T&C apply only to natural or legal entities or legally responsible limited companies which, at the time of entering into the contract, are exercising their commercial or self-employed professional activity (definition of company owner as per art. 14 par. 1 BGB [German Civil Code]) or to legal entities of public law or public separate funds.
- 1.2. The T&C apply in particular to contracts on the sale and/or delivery of movable property ("goods" in the following) without consideration of whether the seller produces these goods itself or purchases them from sub-suppliers (art. 433, 650 BGB) and to contracts for work and services (art. 631 BGB). The T&C apply in their current version as a framework agreement also to future contracts on the sale and/or delivery of movable objects with the same buyer, without the seller having to reference the T&C in every individual case. In case of any changes to the T&C, the seller will inform the buyer immediately. Such changes will come into force between seller and buyer if the buyer does not object to the validity within one month after receipt of the change notification and the seller has included information about the consequence of failure to object in the change notification.
- 1.3. Deviating, conflicting or supplementary General Terms and Conditions from the buyer will become part of the contract only if and insofar as the seller has expressly consented to their validity in writing. This requirement for consent also applies if the seller executes the delivery to the buyer outright while being aware of conflicting conditions or buyer's conditions deviating from these conditions.
- 1.4. Any individual agreements with the buyer made in individual cases (including subsidiary agreements, supplements and amendments) always take priority over these T&C.
- 1.5. Legally relevant declarations and notices which must be made by the buyer towards the seller after finalising of a contract (e.g. deadlines, notices of defect, declaration of termination or reduction) reguire the written form to become effective (excludes emails).
- **1.6.** Information on the validity of legal provisions is only of clarifying character. Even without such a clarification, the legal provisions therefore apply, in as far as they are not directly changed or expressly excluded in these T&C.

2. QUOTATION and QUOTATION DOCUMENTS, TERMINATION

2.1. The seller's quotations are not binding and without obligation. This also applies if the seller provides the buyer with catalogues, images, technical documentation (e.g. drawings, plans, calculations, numerical simulations, references to DIN standards), other product descriptions or documents – also in electronic form – for which the seller reserves right of ownership and copyrights. The buyer must not make these objects accessible to third parties, disclose them. use them himself or through third parties or copy them, neither as such nor their content. Upon the seller's request, the buyer must return these objects to the seller in full and destroy any copies made, if these are no longer required by the seller as part of regular business or if negotiations do not lead to finalizing of a contract.

- 2.2. When the buyer orders the goods, this is considered as a binding tender to contract
- 2.3. Acceptance can be declared either in writing (e.g. with an order confirmation) or by delivery of the goods to the buyer. Failure to respond to an order does not constitute acceptance under any circumstances.
- 2.4. The seller has the right to reject acceptance of an order by the buyer, in particular if it becomes evident that the seller's claim for payment from the individual contract would be at risk due to the buyer's lack of capacity for payment at the time of accepting the order. This is the case in particular if the customer's financial standing is rated as "high risk" (rating level 7 or lower) by Euler Hermes Forderungsmanagement Deutschland GmbH or if another reason as defined by art. 321 par. 1 BGB is present.
- 2.5. A verification of the stipulations in an order with respect to copyright or other intellectual property right infringements must be conducted by the buyer. If the buyer finds that the seller's stipulations or their implementation infringe the intellectual property rights of third parties, the seller can withdraw from the contract or – in case of a continuing obligation relationship or an already partially executed contract - terminate the order without notice.
- 2.6. The seller has the right to terminate the contract without notice if there is a good reason for this. A good reason is present in particular if it becomes evident after entering into the contract that the seller's contractual payment claims are at put at risk by the customer's capacity for payment. Legal reasons for refusal to perform, termination and withdrawal remain unaffected.

3. PRICES AND PAYMENT TERMS

- 3.1. Unless otherwise agreed in individual cases, the seller's prices current at the time of entering into the contract apply. The prices apply ex warehouse including packaging. The prices are exclusive of the current statutory added-value tax.
- 3.2. For shipment sales (section 5.1 of these T&C), the seller is additionally responsible for paying the transport/shipping costs ex warehouse and the costs of any transport insurance requested by the buyer. Any customs duties, fees, taxes and other public levies must be paid by the seller.
- 3.3. The purchase price is due and payable within 5 days of shipping of the goods. For contracts with a delivery value of over 5,000.00 EUR, however, the seller has the right to demand a payment on account of 1/3 of the purchase price. The payment on account is due and payable within 5 days of the invoice date.
- 3.4. The seller will be considered in default of the payment when the payment period shown above has expired. During the default period, interest must be paid on the purchase price at the applicable legal default interest rate at the time, but at last to the amount of 9 per cent above the applicable base rate of the European Central Bank at the time. The seller's claim to the commercial default inter est (art. 353 HGB [German Commercial Code]) remains unaffected towards business persons. The seller reserves the right to assert claims for additional damage caused by default.

- 3.5. The seller is entitled to offsetting or retention rights only insofar as its claim has been established in a legally binding manner or is uncontested. In case of defects on the delivery, the seller's reciprocal rights, in particular as per section 7.6, sentence 2 of these T&C, remain unaffected
- 3.6. If it becomes evident after entering into the contract that the seller's claim to the purchase price is at risk due to the buyer's lack of capacity for payment (e.g. due to an application for initiating insolvency proceedings), the legal provisions give the seller the right to a refusal to fulfil the obligation and – after fixing of a time limit, if applicable - the right to withdraw from the contract. For contracts concerning the production of non-exchangeable goods (custom products), the seller can declare withdrawal immediately; the legal provisions on dispensing with the fixing of a time limit remain unaffected.

4. DELIVERY DEADLINE AND DEFAULT IN DELIVERY

- 4.1. The delivery deadline must be agreed upon individually or must be set by the seller with reasonable discretion upon acceptance of the order. If this is not the case, the delivery deadline is 8 weeks from the date of entering into the contract. Delivery is "ex works".
- 4.2. Partial deliveries are permitted to a reasonable extent. These are invoiced separately.
- 4.3. If the seller cannot comply with binding delivery deadlines due to reasons for which it is not responsible (e.g. non-availability of the product/service, any interruption of operations, impossibility of manufacturing the goods on the common machines, difficulties in procuring material or energy sources, transport delays, strike, lawful lockouts, lack of workforce, lack of energy sources or raw materials, difficulties in procuring the required official approvals, official measures, or incorrect, late or failed deliveries from suppliers), the seller must inform the buyer of this without delay and at the same time notify the buyer of the expected new delivery deadline. If the product/service is not available within the new delivery deadline, the seller has the right to withdraw from the contract wholly or in part if the seller informs the buyer about the non-availability within the new delivery deadline without delay; any counterperformance already provided by the buyer must be immediately reimbursed by the seller. Non-availability of the product/service in this sense is in particular a failure of the sub-supplier to supply the seller in time if the seller has entered into a congruent covering transaction, neither the seller nor the sub-supplier are at fault or the seller is not obligated to procure in the individual case.
- 4.4. The legal provisions determine when the seller defaults on the delivery. In any case, however, a reminder notice from the buyer is required.
- 4.5. The legal requirements notwithstanding, the buyer is only entitled to withdraw from the contract if the seller is responsible for the failure to comply with the delivery deadline and/or if the buyer had set the seller a reasonable period of grace which has expired.
- 4.6. The buyer's rights as per section 8 of these T&C and the seller's legal rights, in particular in case of an exclusion of the obligation to perform (e.g. due to impossibility or unreasonableness of the performance and/or subsequent performance) remain unaffected.

367

5. DELIVERY, PLACE OF DELIVERY, TRANSFER OF RISK. ACCEPTANCE, DELAY IN ACCEPTANCE

- 5.1. Delivery is ex warehouse. Place of delivery is the seller's location. At the buyer's request and at the buyer's expense and risk, the goods will be sent to a different destination (shipment sales). Unless agreed otherwise, the seller has the right to determine the shipping method (in particular forwarding company, shipping route, packagina) independently.
- 5.2. Any tools, moulds, devices, models, assembly parts and other production equipment (jointly "tools") to be provided must be handed over to the seller free of charge, free of extra costs and in good time, without the seller becoming liable for their deterioration or destruction. The seller has the right to dispose of, at the buyer's expense, any tools or paid-for goods which have not been collected within a reasonable period set by the seller.
- 5.3. If an acceptance as per the legal provisions is required, the buyer must accept the completed work, which is ready for acceptance, upon request or upon notification of completion by the seller. If the buyer refuses the acceptance, it must notify the seller of the defects without delay, but within of 15 working days after provision of the work at the latest.
- 5.4. If the buyer does not refuse the acceptance within the above period listing at least one defect, the work will be considered as accepted. This also applies if the work is commissioned or put into use. The buyer must not refuse acceptance in case of insignificant defects.
- 5.5. The risk of accidental destruction and accidental deterioration of the goods is transferred with handover to the buyer at the latest.
- 5.6. For shipment sales, however, the risk of accidental destruction and accidental deterioration of the goods as well as the risk of delay passes already with delivery to the forwarder, the carrier or the person or institution otherwise designated for executing the shipping (the start of the loading process is decisive). If an acceptance has been agreed, this is decisive for the transfer of risk. If the buyer defaults on the acceptance, this is equivalent to handover or acceptance
- 5.7. If the buyer has defaulted on the acceptance or omits to perform a cooperation task or if the delivery from the seller is delayed for other reasons for which the buyer is responsible, the seller has the right to demand compensation for the damage caused by this, including additional expenditure (e.g. storage costs). For this, the seller will charge a flat-rate compensation of 0.25 % of the invoice total for each full calender week, starting with the expiration of the delivery deadline or - if no delivery deadline was set - with the notification of readiness for shipping of the goods, but to a maximum of 10.00 % of the purchase price of the goods or of the wages. The compensation will not be omitted in case of a final non-acceptance
- 5.8. The proof of a higher damage and the seller's legal claims (in particular compensation for additional expenditures, adequate reimbursement, cancellation) remain unaffected; the flat-rate payment, however, must be offset against further claims for damages or compensation for expenditures.
- 5.9. The buyer is entitled to prove that only a substantially lesser damage than the above flat-rate (section 5.5) or no damage at all was sustained by the seller.

GENERAL TERMS AND CONDITIONS

6. **RETENTION OF TITLE**

- 6.1. The seller retains the title in the goods until receipt of all current and future claims from the contract of sale and an ongoing business relationship with the buyer.
- 6.2. If the buyer acts in breach of the terms of the contract, in particular by failing to pay the due purchase price and by refusing the acceptance, the seller has the right to withdraw from the contract as per the legal provisions and/or to demand return of the goods based on the retention of title. If the seller demands return of the goods, this does not at the same time include a declaration of with drawal from the contract, unless the seller has expressly declared this in writing. The seller rather has the right to simply demand return of the goods and reserve the right to withdrawal. If the buyer does not pay the due purchase price, the seller has the right to assert these rights only if it had previously set a reasonable payment deadline for the buyer without success or if such a deadline is expendable as per the legal provisions.
- 6.3. The buyer has the duty to take good care of the goods subject to retention of title. In particular, the buyer has the duty to sufficiently insure these against fire, water and theft damage to the value as new at its own expense. If maintenance and inspection work is required, the buyer must carry these out in good time at its own expense.
- 6.4. The goods subject to retention of title must not be mortgaged or transferred as a safety to third parties before complete payment has been made. In case of seizure or other interventions by third parties, the buyer must notify the seller in writing immediately.
- 6.5. The buyer has the right to resell and/or process the goods subject to retention of title as part of regular business routine. The following provisions apply additionally in this case:
 - 6.5.1. The seller must transfer to the buyer already at this time all claims which arise for him from the reselling towards its purchasers or third parties, regardless of whether the goods have been sold without or after processing. This constitutes acceptance of the transfer by the buyer. The buyer remains authorised to collect this claim even after the transfer. The seller's authority to independently collect the claim remains unaffected by this. The seller, however, undertakes not to collect the claim as long as the buyer is meeting its payment obligations towards the seller, has not defaulted on its payments and has not filed for initiating insolvency proceedings and no other defect has occurred in its capacity for payment. If this is the case, however, the seller can demand that the buyer discloses the ceded claims and their debtors to the seller, provides all information required for collection, hands over the associated documents and notifies the debtors (third parties) of the transfer
 - 6.5.2. Processing or reshaping of the goods subject to retention of title by the buyer must always be conducted for the seller as the manufacturer as per art. 950 BGB. The buyer's expectancy for the goods continues in the reshaped object. If the goods subject to the retention of title are processed jointly with other objects not belonging to the seller, the seller acquires part ownership in the new object at the ratio of the invoice value of the seller's goods to the other processed objects at the time of processing. Apart from that, the same applies to the object resulting from the processing as to the goods delivered subject to retention of title.

- 6.5.3. If the goods subject to the retention of title are inseparably joined, mixed or blended with other objects not belonging to the seller, the seller acquires part ownership in the new object at the ratio of the invoice value of the seller's goods to the other joined, mixed or blended objects at the time of processing. Mixing or blending. If the joining, mixing or blending is conducted in such a way that the buyer's object can be regarded as the main object, it must be considered as agreed that the buyer transfers part ownership to the seller at the respective ratio. The seller must accept this transfer. Apart from that, the same applies to the object resulting from the joining, mixing or blending as to the goods delivered subject to retention of title
- 6.5.4. The buyer must keep in its custody the sole ownership or part ownership in an object resulting as per sections 6.5.2 and 6.5.3 for the seller as the indirect owner free of charge.
- 6.6. The buyer undertakes to release the securities to which the seller is entitled at the seller's request insofar as the realisable value of the seller's securities exceeds the claims to be secured by more than 10.00 %; the selection of the securities to be released is incumbent on the seller.

7. WARRANTY

- 7.1. The legal provisions apply to the buyer's rights in case of material defects and legal deficiencies (including defective delivery and short delivery as well as inexpert assembly/installation or inadequate assembly/installation instructions), unless specified otherwise in the following. In all cases, the special legal provisions remain unaffected in case of final delivery of the goods to a consumer (supplier recourse as per art. 445a, 445b, 477,478 BGB), insofar as the right to compensation is not affected.
- 7.2. The seller's warranty is primarily based on the agreement made on the condition and quality of the goods. The agreement on the condition and quality of the goods are the product descriptions designated as such (also from the manufacturer) which were handed over to the buyer before the order or which were included in the contract
- 7.3. Insofar as the condition and quality was not agreed upon, an assessment as to whether a defect is present or not must be made based on the legal regulations (art. 434 par. 1 sent. 2 and 3 BGB). The seller accepts no liability, however, for public statements by the manufacturer or other third parties (e.g. advertising statements). The seller also accepts no liability for defects caused by unsuitable or inexpert use, incorrect assembly/installation or startup by the buyer or third parties, normal wear and tear, or incorrect or negligent handling. Beyond this, the seller also accepts no liability for defects which result from inexpert changes made without the seller's consent or from repair work carried out by the buyer or third parties.
- 7.4. The buyer's warranty rights require that the buyer has correctly met its examination and notification obligations as per art. 377, 381 HGB. If a defect becomes evident during the examination or subsequently, the seller must be notified of this in writing immediately. The notification is regarded as having been issued immediately if it occurs within 2 weeks from the occurrence of the defect, whereby the timely dispatch of the notification is sufficient for meeting this deadline. If the buyer fails to notify the seller of the defect, the goods will be regarded as approved. Independent of this examina-

tion and notification obligation, the buyer must report any obvious defects – i.e. defects which are apparent with correct examination - (including defective delivery and short delivery) in writing within 2 weeks from delivery, whereby here as well the timely dispatch of the notification is sufficient for meeting this deadline. If the buyer does not carry out the correct and timely examination and/or notification of defects, the seller's liability for the defect which was not reported or not reported in due time will be excluded. The goods will then be regarded as approved.

- 7.5. If the delivered object is defective, the seller can initially choose whether to provide subsequent performance by eliminating the defect (rectification) or by delivering an object free from defects (substitute delivery). The seller's right to refuse subsequent performance subject to the legal requirements remains unaffected.
- 7.6. The seller has the right to make the owed subsequent performance dependent on the buyer paying the due purchase price.
- 7.7. The buyer, however, has the right to retain a part of the purchase price at the appropriate ratio of the defect. The buyer must grant the seller the time and opportunity required for the owed subsequent performance; in particular the buyer must hand over the nonconforming goods for verification purposes. In case of a substitute delivery, the buyer must return the nonconforming object to the seller as per the legal provisions. Subsequent performance includes neither de-installation of the nonconforming object nor re-installation if the seller was originally not obligated to carry out installation, unless the seller is responsible for the defect.
- **7.8.** The seller is responsible for paying the expenditures, in particular transport, travel, labour and materials costs, if a defect is indeed present. If the buyer's demand for elimination of a defect proves to be unjustified, however, the seller can demand compensation for the incurred costs from the buyer. The seller only pays the costs for de-installation and re-installation if and insofar as it is liable for paying damages for the defect.
- 7.9. In urgent cases, e.g. if operational safety is at risk or if excessively high damage must be averted, the buyer has the right to eliminate the defect independently and to demand compensation from the seller for the expenditures objectively required for this. The seller must be notified of such independent remedial actions immediately, beforehand if possible. The right to eliminate defects independently does not apply if the seller would be entitled to refuse the respective subsequent performance as per the legal provisions.
- 7.10. If the subsequent performance has failed or if a grace period set by the buyer for the subsequent performance has expired unsuccessfully, the buyer has the right to choose whether to withdraw from the contract of sale or to demand an appropriate reduction of the purchase price. No right to withdrawal applies, however, in case of an insignificant defect.
- 7.11. The buyer can claim for damages or compensation for futile expenditures only as per section 8 of these T&C and these are otherwise excluded

368

8. OTHER LIABILITIES

- 8.1. Unless stipulated otherwise in these T&C including the following provisions, the seller is liable as per the applicable legal provisions in case of infringement of contractual and non-contractual obligations
- 8.2. The seller is only liable to pay damages regardless of the legal basis – in case of intent and gross negligence. In case of ordinary negligence, the seller is liable only
 - 8.2.1. for damage resulting from injury to life, body or health
 - 8.2.2. for damage resulting from the breach of an essential contractual duty (duty where fulfilment only enables correct execution of the contract in the first place and for which the other party to the contract regularly trusts or can regularly trust that it will be fulfilled); in this case, however, liability is limited to compensation for the foreseeable, typically occurrina damaae
- 8.3. The liability limitations resulting from section 8.2 do not apply insofar as the seller has fraudulently concealed or intentionally caused a defect or has accepted a guarantee for the quality and condition of the goods, as well as for any buyer's claims based on product liability law. The buyer can only withdraw from or cancel the contract due to breach of duty if the seller is responsible for the breach of duty. A free right of cancellation for the buyer (in particular as per art. 650, 648 BGB) is excluded. Apart from that, the legal requirements and legal consequences apply.
- 8.4. Insofar as the seller's liability is excluded or limited, this also applies to the personal liability of the seller's employees, legal representatives and agents.
- 8.5. The buyer bears the full burden of proof for the presence of the defect. Art. 477, 478 par. 1 BGB remain unaffected in case of a final sale in the delivery chain to a consumer.
- 8.6. The buyer also beyond the duties incumbent on it as per art. 254 BGB – is obligated to alert the seller to the risk of an unusually high damage and to make all reasonable efforts to avert or mitiaate damaae.

9. INTELLECTUAL PROPERTY RIGHTS

9.1. As per this section 9, the seller is responsible for the goods being free from intellectual property rights or copyrights by third parties, insofar as the goods were not manufactured based on the buyer's specifications (drawings, design, plans. etc.). Each party to the contract must immediately notify the other party in writing if any claims are made towards it due to the infringement of such rights.

GENERAL TERMS AND CONDITIONS

NOTES

- **9.2.** If the goods infringe on a commercial property right or copyright of a third party, the seller must change or replace the goods as per the seller's choosing and at its own cost in such a way that no third-party rights are infringed any longer while the goods continue to fulfil the contractually agreed functions or the seller must provide the buyer with the usage right by entering into a license agreement. If the seller is unable to do this within a reasonable period of time, the buyer has the right to withdraw from the contract or to reduce the purchase price by a reasonable amount. Any claims for damages by the buyer are subject to the restrictions of section 8 of these T&C.
- **9.3.** If products from other manufacturers delivered by the seller cause any legal breaches, the seller must choose to either assert its claims against the manufacturers and sub-suppliers on account of the buyer or transfer these to the buyer. In these cases, claims against the seller as per section 9 exist only if a legal enforcement of the claims listed above against the manufacturers and sub-suppliers failed or is expected to fail, e.g. due to insolvency. However, as per further specification of section 8, the seller owes compensation for damage or expenditures only if it is responsible for the defective title.

10. CONFIDENTIALITY

- **10.1.** Each party to the contract must use any documents (this also includes samples, models and data) and knowledge gained from the business relationship only for the jointly pursued purposes and keep these confidential from third parties with the same diligence as its own comparable documents and knowledge if the other party to the contract designates these as confidential or has an obvious interest in their secrecy.
- **10.2.** This duty starts from initial receipt of the documents or knowledge and ends 36 months after the end of the business relationship.
- **10.3.** The duty does not apply to documents and knowledge which are generally known or were already known to the party to the contract at the time of receipt without being obligated to secrecy, or which are subsequently transferred by a third party authorised to pass these on, or which were developed by the receiving party to the contract without using secret documents or knowledge from the other party.

11. LIMITATION OF TIME

11.1. Deviating from art. 438 par. 1 no. 3, 634a par. 1 no. 3 BGB, the limitation period for claims from material defects and legal deficiencies is one year after handover. If an acceptance is agreed or required by law, the limitation period starts with the acceptance. In case of claims based on injury to life, body or health and in cases of intent and gross negligence, the statutory limitation period is maintained.

- 11.2. If the goods are a building or an object which was used for a building according to its usual mode of use and caused the building's defect (construction material), the limitation period as per the legal provisions is 5 years from handover (art. 438 par. 1 no. 2, 634a par. 1 no. 2 BGB). Special legal regulations for rights in rem of third parties (art. 438 par. 1 no. 1 BGB), in case of fraudulent behaviour by the seller (art. 438 par. 3 BGB) and for claims in supplier regress in case of final delivery to a consumer (art. 445b, 478 par. 2 BGB) remain unaffected. Instead of the limitation periods as per art. 445b BGB, however, only the limitation period as per the previous section applies if the final sale in the delivery chain is not a consumer goods purchase.
- 11.3. The above limitation periods also apply to contractual and pre-contractual or non-contractual claims for compensation by the buyer which are based on a defect on the goods, unless the application of the regular statutory limitation period (art. 195, 199 BGB) would result in a shorter limitation in the individual case. The limitation periods from the product liability law remain unaffected in all cases. The statutory limitation periods exclusively apply to any other claims for compensation by the buyer as per section 8.

12. GENERAL PROVISIONS

- 12.1. These T&C and the relationship between seller and buyer are solely governed by the law of the Federal Republic of Germany, unless agreed otherwise. The application of international uniform law, in particular the United Nations Convention of 11 April 1980 on Contracts for the International Sale of Goods, is excluded. Assumptions and effect of ownership subject to section 6 are subject to the laws at the respective location of the object, insofar as it renders the choice in favour of German law invalid or ineffective.
- **12.2.** Nürnberg (Germany) is the exclusive also international place of jurisdiction for all disputes arising directly or indirectly from the contractual relationship.
